Invoicing & VAT returns — operating procedure

SECTION 03-finance TYPE document STATUS active OWNER Founder UPDATED 2026-07-27

The company is **VAT-registered and filing quarterly** — this document is the finance-side operating procedure that was missing between the analysis in `04-compliance-ksa/vat-compliance-memo.docx` and reality. Figures and deadlines below should be confirmed with the accountant. Entity identity and the VAT number live in `01-governance/company-facts.md` — referenced, not restated.

⚠️ Immediate action — the first return is overdue

The VAT registration is effective **2025-11-01** with a **quarterly** period. The first return (period Nov–Dec 2025) was due **2026-01-31**. As of **2026-07-27 that filing — and likely the Q1 2026 return (due 2026-04-30) — is overdue.**

1. File the outstanding return(s) now via the ZATCA portal (zatca.gov.sa), even if the revenue for the period is zero — a nil return still has to be filed.
2. Expect late-filing / late-payment penalties; check whether a ZATCA penalty amnesty/exemption initiative is currently in force before paying.
3. Engage the accountant to reconcile any output VAT collected since 2025-11-01 against invoices issued.
4. Set the recurring calendar reminders (14 days ahead) that `04-compliance-ksa/saudi-tax-and-compliance-calendar.docx` prescribes.

Return calendar (quarterly, due 30 days after period end)

Period	Due date
Nov–Dec 2025 (first, short)	2026-01-31 — **overdue**
Jan–Mar 2026	2026-04-30 — **verify filed**
Apr–Jun 2026	2026-07-30 — **this week**
Jul–Sep 2026	2026-10-30
Oct–Dec 2026	2027-01-30

Tax-invoice requirements (ZATCA)

Every tax invoice must carry, at minimum:

- Seller legal name **in Arabic**: شركة بدع الدولية

- Seller VAT number and CR number (see company-facts)
- Seller address (Riyadh, Al Baqqal 12965)
- Sequential invoice number and issue date
- Line items with the VAT rate (15%) and VAT amount broken out
- For **simplified** invoices (B2C receipts): a ZATCA-compliant QR code (TLV)
- For B2B: the buyer's name and VAT number

Buyer-side VAT on foreign services (Google Cloud, Gemini, Stripe fees, etc.) is accounted for under the **reverse-charge** mechanism — see the VAT memo.

How the products map to invoices

- **flygaca.com (Moyasar):** consumer prices are **VAT-inclusive** (the pricing page shows "incl. 15% VAT"). Moyasar receipts are payment receipts, not tax invoices — a simplified tax invoice (with QR) must be generated per sale, and B2B school invoices are full tax invoices (VAT-exclusive prices + 15%).
- **captadel.com (Stripe):** same pattern; once the Stripe account carries the entity's registration, enable Stripe Tax + tax-ID collection (see the captadel SaaS runbook §3) so B2B invoices carry the buyer's VAT number.
- Invoice numbering: single sequential series per year (e.g. `INV-2026-0001`), shared across both products; the accountant may split series later.

E-invoicing (Fatoora)

Phase 1 (generation) obligations and the Phase 2 (integration) wave analysis live in `04-compliance-ksa/zatca-fatoora-e-invoicing-compliance-pack.docx`. That pack assumed "Wave 8+ (revenue ≥ SAR 25M), estimated 2027" — **re-verify the wave assignment now that the VAT registration is real**, and pick the invoicing software (the pack recommends Qoyod, then Zoho) before invoice volume starts.

Records

Keep invoices, returns and supporting records **6 years**, with Arabic-language records available (VAT memo, retention section). Store filed returns and ZATCA acknowledgements in the founder's records alongside the registration certificates.
