Purpose

This document defines how Fly GACA measures the health of its B2B customers — flight schools / Approved Training Organizations (ATOs), charter operators, MROs, and commercial operators that license Fly GACA for their cadets and staff. The health score is a single 0–100 number that drives proactive Customer Success motions (onboarding, at-risk intervention, renewal, expansion).

It is operationalized by [scripts/health_score.py](#) — see [health-dashboard-spec.md](#) for the dashboard and run instructions.

Scoring Dimensions & Weights

The composite score is a weighted blend of five dimensions, each scored 0–100. Weights sum to 1.0.

Dimension	Weight	What it measures
Product Usage	30%	Active users vs. licensed seats; use of the library, tools, study/exam prep, and Captain Adel
Engagement	20%	Logins, session depth, response to outreach, QBR participation
Support Health	20%	Ticket volume/severity, time-to-resolution, escalations
Financial / Contract	15%	Payment timeliness, contract status, seat utilization
Sentiment	15%	NPS / CSAT, qualitative feedback, champion strength

```
composite = 0.30·usage + 0.20·engagement + 0.20·support + 0.15·financial + 0.15·sentiment
```

Score Bands

Band	Range	Meaning	Playbook
Healthy	80–100	Realizing value; expansion/advocacy candidate	Expansion
Neutral	60–79	Stable but watch for drift	Renewal
At-Risk	0–59	Churn risk; needs intervention	At-Risk

Refresh Cadence

Scores are recalculated **weekly**. Any account scoring below 60 automatically notifies the assigned CSM and enters the relevant playbook.
