

Expansion / Upsell Playbook

SECTION 08-customer-success TYPE playbook STATUS active OWNER Founder

UPDATED 2026-08-09

Purpose

This playbook describes how Fly GACA identifies and executes expansion — seat growth, tier upgrades, and cross-sell of additional modules — to drive net revenue retention above 100% while deepening each customer's compliance coverage. Expansion is pursued primarily with **Healthy-band** accounts that have already realized value.

Growth-Opportunity Identification

Watch for expansion signals:

Signal	Opportunity
Adoption near or above licensed seats	Seat expansion
Strong usage but limited to core modules	Cross-sell adjacent modules
New fleet, base, or operation type	Scope expansion
Repeated requests for features in a higher tier	Tier upgrade
New GACA obligation affecting the customer	Compliance module cross-sell
Healthy score + engaged champion	Advocacy + expansion candidate

Tier-Upgrade Paths

From	To	Typical trigger
Starter	Professional	More users, multi-module compliance needs
Professional	Enterprise	Multiple operations, advanced audit/reporting, SSO
Add-on modules	Any tier	Cross-sell of document automation, analytics, training

Map upgrades to the customer segments in [customer-success.md](#) (flight schools, charter operators, MROs, commercial operators).

Cross-Sell Modules

- Advanced audit-preparation and finding-management.

- Document automation and controlled-document management.
- Compliance analytics and executive dashboards.
- Training / certification tracking for crew and maintenance staff.

Business-Case Development

1. Quantify current value realized (audits passed, hours saved, findings avoided).
2. Identify the gap the expansion closes (new obligation, scale, or capability).
3. Model the ROI for the customer in their own compliance/operational terms.
4. Align the proposal to an upcoming milestone (QBR, renewal, audit cycle).

Pricing Discussion

- Anchor on incremental value, not list price.
- Bundle expansion with renewal where timing aligns (see [renewal playbook](#)).
- Offer ramped pricing for large seat or multi-operation rollouts.

Expansion Tracking & Revenue Attribution

Metric	Target
Net revenue retention	> 100%
Accounts with an open expansion opportunity	Growing
Expansion win rate	> 30%
Expansion revenue attributed to CS	Tracked per quarter

Log every expansion in the CRM with source signal, owner, stage, and amount so revenue can be attributed back to the CS motion.
