Your Personal Guide to Studying for the Saudi PPL (and Beyond)

Version: 2026-06-16 **Audience:** Individual student pilots studying independently for a Saudi civil aviation licence **Primary language:** English — Arabic parity noted throughout (AR headings provided) **Status:** Educational reference — NOT an official GACA publication

Independent platform notice / إشعار الاستقلالية Fly GACA is an independent educational study platform. It is **not** affiliated with, endorsed by, or a substitute for the General Authority of Civil Aviation (GACA). Everything in this guide — including any reference to regulations, hour requirements, or exam structures — is for study orientation only. Always verify current requirements directly with GACA and your approved flight training organisation (FTO). Regulations change; this guide does not update automatically.

Why This Guide Exists / لماذا هذا الدليل

Until now, Fly GACA's curriculum materials were built for academies and instructors. This guide is built for **you** — the individual who wants to earn a Saudi PPL (or progress toward a CPL or ATPL) and is doing a significant part of the theoretical groundwork on their own. It shows you how the five parts of Fly GACA fit together as a personal study system, and gives you a phase-by-phase plan that takes you from first login to mock-exam readiness.

Part 1 — Understanding Your Five Study Tools

الجزء الأول — أدواتك الخمس للدراسة

Fly GACA is built around five integrated sections. Learning how they connect is itself the first study skill.

1. Library / المكتبة

What it is: The authoritative reference layer. The Library hosts the GACARs (the Saudi civil aviation regulations), ICAO standards, approved handbooks, aeronautical information publications, and other primary documents.

How to use it in self-study:

- Always go here **to verify** — not to read from scratch.
- When Captain Adel teaches a rule (e.g. VFR minima), open the corresponding GACAR in the Library and read the actual text. Adel explains; the Library is the source of truth.
- Bookmark the GACAR Parts you use most: Part 61 (Licensing), Part 91 (General Operating Rules), Part 1 (Definitions).
- Use the Library's search to look up any term Adel mentions that you are not certain about.

When NOT to rely on it alone: The Library presents documents as published at a point in time. Check GACA's official website for the most current version before any licensing decision.

2. Captain Adel / الكابتن عادل

What it is: Fly GACA's AI ground-school tutor — a conversational instructor trained on Saudi aviation context and PPL ground-school subjects. Adel teaches concepts, explains regulations in plain language, answers follow-up questions, and works through practice problems with you.

How to use Captain Adel effectively:

Start every topic with the prompt the Ground School module gives you. Each lesson in Ground School includes a ready-made "Adel prompt" — a carefully phrased question that opens the topic at exactly the right level. Use it. Then ask follow-up questions freely.

Probe and challenge. After Adel explains something, ask: "Can you give me a Saudi-specific example?" or "What would a PPL exam question look like on this topic?" or "Where does GACAR specifically address this?"

Use Adel for calculation practice. Weight-and-balance problems, E6B problems, fuel calculations — Adel can walk you through worked examples. Do the arithmetic yourself first, then compare.

Use Adel for mnemonics and pattern recognition. Ask: "Give me a memory aid for the airspace VMC minima table."

The limits of Captain Adel — please read:

- Adel is an AI. He can make errors, reflect outdated information, or phrase a regulatory statement imprecisely.
- **Never rely on an Adel answer about a regulation without checking the Library and the actual GACAR.**
- Adel is not a flight instructor and does not replace your real instructor's briefings.

- For anything operational — actual flight planning, airspace clearances, NOTAMs, weather decisions — use official sources only.
 - If Adel and the Library disagree, the Library (and ultimately GACA) is correct.
-

3. Flight Tools / أدوات الطيران

What it is: Interactive calculators and trainers — the E6B flight computer, weight-and-balance tool, airspace structure viewer, VFR quick card, and chart-symbols trainer.

How to use it in self-study:

- Use the Tools **after** a lesson, not instead of it. First understand the concept with Adel and the Library, then practise the calculation with the Tool.
 - The E6B tool is especially valuable: work through a wind-triangle problem by hand, then verify with the tool. Repeat until the method is automatic.
 - The Airspace tool reinforces the airspace lesson visually — spend time clicking through Saudi FIR structure.
 - The VFR quick card is a study aid, not an in-flight checklist. Use it to memorise the VMC minima table.
 - The Weight & Balance tool lets you vary the loading scenario — try loading the aircraft outside the envelope deliberately to see the effect.
-

4. Guides / الأدلة

What they are: Plain-language orientation articles covering the Saudi licensing journey — PPL requirements, the medical process, English language proficiency, the skills test, and progression routes.

How to use it in self-study:

- Read the Guides **first**, before starting Ground School, to understand the overall journey you are on.
 - The Guide on Saudi PPL requirements gives you the framework (age, medical class, flight hours, theoretical knowledge exams, skills test) so you know what each study phase is building toward. **The Guide is for orientation — always verify current numbers with GACA and your FTO.**
 - The medical Guide helps you understand the Class 2 medical before you book an appointment — but does not replace your Aviation Medical Examiner (AME).
 - Return to the Guides when you have questions about the process (e.g. "can I log hours in a non-Saudi-registered aircraft?") — and then verify with your FTO.
-

5. Ground School / المدرسة الأرضية

What it is: The structured theoretical knowledge programme — nine subjects, 34 lessons, each with learning objectives, a Captain Adel teaching prompt, a linked reading resource, and a quiz bank. This is the core of your exam preparation.

How to use it in self-study:

- Follow the module sequence below. The ordering is deliberate.
- Complete each lesson: read the objective → use the Adel prompt → read the linked resource in the Library → take the module quiz.
- Do not skip to the quiz. The quiz tests what the lesson teaches; without the lesson, you are just memorising answers.
- After completing all nine modules, use the full 14-bank quiz shuffle and the PPL Mock Exam (Set A) as your readiness assessment.

Part 2 — Your Licensing Journey Context

الجزء الثاني — سياق رحلة الحصول على الرخصة

This section is orientation only. Requirements are set by GACA and your FTO. Read the **Guides** section of Fly GACA for more detail, then verify everything with your FTO and directly with GACA before making decisions.

A Saudi PPL requires you to satisfy several parallel tracks simultaneously — theoretical knowledge is only one of them. Understanding all tracks from the start helps you plan your time.

Track	What it involves	Where to learn more
Medical	Class 2 medical certificate from a GACA-approved AME	Fly GACA Guides → Medical
English Language	ICAO language proficiency (Level 4 minimum)	Fly GACA Guides → English Proficiency
Flight Hours	Minimum flight hours including solo, cross-country, and instrument time	Fly GACA Guides → PPL Requirements; GACAR Part 61 in the Library
Theoretical Knowledge	Written examination(s) covering the nine ground-school subjects	This guide + Ground School
Skills Test	Practical flight test with a GACA examiner	Your FTO

Recommendation: Get your Class 2 medical early — ideally before you invest heavily in ground school — so that any medical factor is identified before you commit significant time and money. This is orientation advice, not medical advice; consult your AME and FTO.

Part 3 — The Study Plan

الجزء الثالث — خطة الدراسة

Overview / نظرة عامة

The plan is structured in **four phases** totalling approximately **12 weeks** at a pace of 8–10 hours of self-study per week. If you can study more, compress it. If you are studying alongside full-time work or flight training, extend it. The phases are not calendar-locked; they are competency-locked — move to the next phase when you meet the milestone, not on a fixed date.

Phase 0 – Orientation	(1 week)
Phase 1 – Foundations	(Weeks 2–5, 4 modules)
Phase 2 – Operations	(Weeks 6–9, 4 modules)
Phase 3 – Integration	(Weeks 10–12, final module + consolidation)
Phase 4 – Mock Exam & Go	(Final readiness check – not time-bound)

Phase 0 — Orientation / المرحلة الأولى: التوجيه

Week 1

Goal: Understand the landscape before opening a textbook.

Task	Where in Fly GACA	Time
Read all five Guides articles	Guides section	2 hrs
Explore the Library — find GACAR Part 61 and Part 91	Library	1 hr
Open Ground School — read all nine module summaries	Ground School	30 min
Try one Captain Adel conversation (use Lesson AL-1 prompt)	Captain Adel	45 min
Explore all Flight Tools — understand what each one does	Flight Tools	45 min

Milestone: You can describe the PPL requirements in your own words, and you know where each type of content lives in Fly GACA.

Study tip: Do not try to memorise anything in Phase 0. This week is about building a mental map, not content.

Phase 1 — Foundations

المرحلة الثانية: الأسس

Weeks 2–5 (four modules)

These four subjects underpin everything else. Air Law gives you the regulatory framework; Principles of Flight and Aircraft Knowledge explain the machine; Meteorology explains the environment.

Module 1 — Air Law & Regulations (Week 2)

الجزء القانوني والتنظيمي

Lesson	Adel Prompt	Library Link	Tool
AL-1: How Saudi aviation is regulated	Built into Ground School	GACAR Foreword	—
AL-2: Airspace classes and the Jeddah FIR	Built into Ground School	—	Airspace Structure
AL-3: VFR rules — minima, altitudes, day/night	Built into Ground School	GACAR Part 91	VFR Quick Card
AL-4: Licensing — the path to a PPL	Built into Ground School	GACAR Part 61	—

Weekly rhythm:

- Day 1–2: Lessons AL-1 and AL-2 (Adel → Library → Tool)
- Day 3–4: Lessons AL-3 and AL-4
- Day 5: Air Law quiz bank (first attempt — do not look things up; note gaps)
- Day 6: Review gaps with Adel; re-read relevant Library sections
- Day 7: Air Law quiz bank (second attempt); record your score

Key concepts to own by end of week:

- ICAO airspace classes A–G and which apply to VFR flight in Saudi Arabia
- VMC minima by airspace class
- VFR cruising altitude rules
- The GACAR Part 61 requirements for a PPL (as of the Library version — verify with GACA)
- What GACA is, what the GACARs are, how ICAO fits in

Captain Adel tip for this module: After the lesson prompts, ask Adel: *"Give me five PPL written-exam style questions on Saudi airspace and VFR rules."* Attempt them, then check each answer in the Library.

Module 2 — Principles of Flight (Week 3)

مبادئ الطيران

Lesson	Focus
POF-1: The four forces and lift	Angle of attack, Bernoulli, Newton
POF-2: Drag and the power curve	Induced vs parasite drag, best speeds
POF-3: Stability and control	CG, longitudinal/lateral/directional stability
POF-4: Stalls, spins and angle of attack	Stall as an AoA event, not a speed event

Weekly rhythm: Follow the same 7-day pattern as Week 2.

Key concepts to own:

- Lift equation (qualitative, not just the formula)
- Why $V_x \neq V_y$ and when you use each
- What moves the stall speed (load factor, bank angle, weight)
- Why the stall is always an angle-of-attack event

Captain Adel tip: Ask Adel to walk you through a scenario: *"The aircraft is in a 60° banked level turn. What is the load factor, and how does the stall speed change?"*

Module 3 — Aircraft General Knowledge (Week 4)

المعرفة العامة بالطائرة

Lesson	Focus
AGK-1: Airframe and flight controls	Structure, primary and secondary controls
AGK-2: Piston engine and propeller	Four-stroke, mixture, carb icing, propeller
AGK-3: Aircraft systems	Fuel, electrical, vacuum, pitot-static
AGK-4: Flight instruments	The six-pack, how each works, failure modes

Key concepts to own:

- Carburettor ice conditions and the response
- What the vacuum system powers and what fails if it fails
- The difference between a pitot failure and a static-port blockage
- Instrument errors (e.g. altimeter lag, gyroscopic precession)

Captain Adel tip: For instruments, ask Adel: *"Walk me through what happens to each of the six instruments if I enter cloud and the vacuum pump fails."* This is a classic exam scenario.

Module 4 — Meteorology (Week 5)

الأرصاد الجوية

Lesson	Focus
MET-1: The atmosphere and the ISA	Layers, lapse rates, ISA deviations
MET-2: Pressure, wind and altimetry	Pressure systems, QNH/QFE/Standard, transition alt
MET-3: Cloud, visibility and hazards	Thunderstorms, icing, turbulence, wind shear
MET-4: Reading METAR and TAF	Decode field by field using Saudi examples

Weekly rhythm: Same 7-day pattern. For MET-4, spend extra time with real METARs — search for OEJN (Jeddah) or OERK (Riyadh) METARs online and decode them alongside the lesson.

Key concepts to own:

- ISA temperature at sea level and lapse rate
- QNH vs QFE vs standard setting — when to use which
- Conditions that produce carburettor icing (not just clouds — clear-air icing is possible)
- How to identify a SIGMET-worthy hazard in a TAF

Captain Adel tip: Paste a real Saudi METAR into your Adel conversation and ask him to decode it field by field.

Phase 1 Milestone Check: Before moving to Phase 2, take the quiz banks for all four Phase 1 modules. Target: 75% or above on each bank before proceeding. If any bank is below 75%, spend an extra day on that subject before continuing.

Phase 2 — Operations

المرحلة الثالثة: العمليات

Weeks 6–9 (four modules)

These subjects deal with what you actually do in the cockpit and how you plan flights. They build directly on Phase 1 foundations.

Module 5 — Navigation (Week 6)

الملاحة الجوية

Lesson	Focus	Tool
NAV-1: Charts, projections and symbology	Chart reading, lat/long, symbols	Chart Symbols Trainer
NAV-2: Dead reckoning and the 1-in-60 rule	Track, heading, drift, correction	—
NAV-3: The flight computer (E6B)	Wind triangle, TAS, time-speed-distance	E6B Flight Computer

Lesson	Focus	Tool
NAV-4: Radio navigation and GNSS	VOR, NDB, DME, GPS	—

Key concepts to own:

- The difference between track and heading, and why they differ
- The 1-in-60 rule and how to apply it in flight
- E6B: wind triangle (heading and groundspeed given track, TAS, wind)
- VOR radials — how to identify your position from two VORs

Flight Tools integration: This is the week where the E6B tool becomes your daily companion. Work at least five wind-triangle problems by hand, check with the tool, and repeat until you are fast.

Captain Adel tip: "Give me a dead-reckoning problem: I want to fly from [point A] to [point B] on a track of 045°T. The wind is 090°/25 kt. My TAS is 110 kt. What heading do I fly and what is my groundspeed?" Work it yourself, then compare to Adel's working.

Module 6 — Human Performance & Limitations (Week 7)

الأداء البشري والقيود

Note: Check the Ground School for the current lesson set. This subject covers hypoxia, spatial disorientation, decision-making (ADM/CRM), fatigue, alcohol and medication effects, and sensory illusions.

Key concepts to own:

- Time of useful consciousness at altitude and the significance of the 10,000 ft threshold
- The leans, graveyard spiral, and other vestibular illusions
- IMSAFE checklist (Illness, Medication, Stress, Alcohol, Fatigue, Emotion)
- Threat and Error Management (TEM) — basic framework

Captain Adel tip: "Describe a scenario where a pilot experiences 'get-there-itis' and walk me through how CRM and ADM should have changed the outcome."

Module 7 — Flight Performance & Planning (Week 8)

أداء الطائرة والتخطيط

Lesson	Focus	Tool
FPP-1: Weight and balance	CG calculation, envelope limits	Weight & Balance
FPP-2: Takeoff and landing performance	Density altitude, chart reading, factoring	—

Lesson	Focus	Tool
FPP-3: Fuel planning	Required fuel, reserves, alternates	—
FPP-4: The VFR flight plan	Filing, fuel stops, alternates, SARTIME	—

Key concepts to own:

- Density altitude: what it is, when it matters, and how to calculate it
- How to read takeoff and landing performance charts (ground roll and 50 ft obstacle)
- Fuel required = flight fuel + reserves (the Saudi requirement — verify in GACAR Part 91 via the Library)
- How to file a VFR flight plan and why SARTIME matters

Flight Tools integration: Use the Weight & Balance tool with multiple loading scenarios. If the tool shows an out-of-envelope condition, ask Adel what the aerodynamic consequences would be.

Module 8 — Operational Procedures (Week 9)

الإجراءات التشغيلية

Note: This is one of the recently added quiz banks. Lesson coverage may be expanding — check Ground School for the current lesson list.

This module covers ATC communications phraseology, emergency procedures, wake turbulence, bird strike, runway incursion awareness, and ICAO/GACAR operational requirements for VFR flight.

Key concepts to own:

- Standard ICAO radio telephony phraseology — position reports, requests, readbacks
- Emergency declaration (MAYDAY vs PAN-PAN) and the expected ATC response
- Wake turbulence categories and avoidance
- Hot spots and runway incursion risk at Saudi aerodromes

Captain Adel tip: Role-play a radio call: *"I am inbound to OEJN as a VFR student, 10 nm south, 2500 ft, with information Alpha. Write out the full initial call I should make, in correct ICAO phraseology."*

Phase 2 Milestone Check: Quiz all four Phase 2 modules. Target: 75%+ on each. If Navigation is below target, spend extra time on the E6B tool. If Performance is below target, work more chart-reading problems with Adel.

Phase 3 — Integration

المرحلة الرابعة: التكامل

Weeks 10–12

Module 9 — Communications & Air Traffic Services (Week 10)

الاتصالات وخدمات حركة الجو

If this subject has been merged with Operational Procedures in the current Ground School build, use Week 10 for your first full integration review. Check the Ground School module list for the current structure.

Integration review task (Week 10): Take all 14 quiz banks back to back in a single sitting — uninterrupted, timed, as if it were an exam. Do not look anything up. Record your score on each bank and compute a total. This gives you a baseline for Phase 4.

Weeks 11–12 — Weak-Subject Consolidation

تعزيز المواد الضعيفة

Take the results from your Week 10 integration quiz and rank your nine subjects from weakest to strongest. Spend Weeks 11–12 as follows:

- **Lowest-scoring subject:** Two full study days (Adel → Library → tools → quiz)
- **Second-lowest:** One full study day
- **Third-lowest:** One half-day
- **Everything else:** One revision session of key facts only

Do a second full integration quiz at the end of Week 12. Your target before entering Phase 4: **no subject below 70%, overall average 80%+.**

Spaced-repetition with the quiz banks: The quiz banks are your spaced-repetition engine. Use them as follows:

- First attempt: no prep, diagnostic only.
 - Review every question you got wrong: understand why (Adel → Library).
 - Second attempt: 24 hours later.
 - Third attempt: 1 week later.
 - Fourth attempt: 2 weeks later. This simple schedule leverages the testing effect — retrieval practice is more effective than re-reading.
-

Phase 4 — Mock Exam & Go Decision

المرحلة الخامسة: الاختبار التجريبي وقرار المضي قدماً

When you are ready (not before Week 12)

PPL Mock Exam — Set A

The PPL Mock Exam (Set A) is available in Fly GACA. It is a full-length simulated written examination drawing across all nine subjects. Treat it exactly as a real exam:

- Block out the full time allowance — no interruptions.
- No notes, no Library, no Adel during the exam.
- Work through every question; if unsure, mark and return.
- Submit and review your results by subject.

Readiness analytics: After the mock exam, Fly GACA's analytics show you your score by subject. Use this table to interpret:

Score	Interpretation	Action
90%+	Strong — ready to consider booking	Verify booking process with your FTO
80–89%	Good — minor consolidation needed	One more week on sub-80% subjects
70–79%	Acceptable — more work needed	Return to Weeks 11–12 pattern
Below 70%	Not ready	Restart Phase 3 consolidation

Before you book a real exam:

- Your FTO must confirm you are ready — they know the current exam format, pass mark, and any changes since this guide was written.
- Confirm the current theoretical knowledge examination syllabus with GACA. Exam content can change; this guide cannot track those changes.
- Ensure your medical, English proficiency, and flight-hour requirements are also on track — a pass in the theoretical exam is only one component.

Part 4 — Study Techniques for Solo Learners

الجزء الرابع — تقنيات الدراسة للطلاب المستقلين

الحلقة الأساسية / The Core Loop

For every lesson, follow this loop:

1. Read the objective (Ground School)
2. Study with Adel (Captain Adel prompt)
3. Verify with the source (Library – relevant GACAR / handbook)
4. Practise with Tools (if a tool applies)
5. Test yourself (quiz bank)
6. Review wrong answers with Adel + Library

Never skip steps 3 or 6. These are the steps most self-studiers skip, and they are the steps that convert short-term familiarity into long-term understanding.

Weekly Structure / البنية الأسبوعية

A productive study week for a solo PPL student looks like this:

Day	Activity	Platform section
Monday	New lesson × 1 (objective + Adel + Library)	Ground School + Captain Adel + Library
Tuesday	New lesson × 1 (objective + Adel + Library)	Ground School + Captain Adel + Library
Wednesday	Tool practice for the week's subject	Flight Tools
Thursday	New lesson × 1	Ground School + Captain Adel + Library
Friday	Quiz bank — current module, first attempt	Ground School quiz
Saturday	Review wrong answers; quiz bank second attempt	Captain Adel + Library + quiz
Sunday	Rest or light review (re-read one lesson objective + key facts)	Ground School

Adjust for your own schedule, but try to keep at least one rest day and always do the review-wrong-answers step before your next lesson.

Working with Captain Adel — Prompt Patterns

نماذج للتفاعل مع الكابتن عادل

Beyond the built-in lesson prompts, these patterns work well:

The Exam Question Generator:

"Give me five PPL written-exam style questions on [topic]. Don't give me the answers yet."
(Attempt them, then ask for answers and explanations.)

The Scenario Walk-Through:

"Walk me through this scenario step by step: [describe a situation]. What should the pilot do at each decision point, and which regulation or principle applies?"

The Comparison:

"What is the difference between [concept A] and [concept B]? Where does the confusion usually come from?"

The Memory Aid:

"Give me a mnemonic or memory framework for [list or table]."

The GACAR Pointer:

"Which GACAR Part and section would a student look at to verify what you just told me about [topic]?" (Always use this last pattern when Adel states a regulation. Then go to the Library and read it.)

Bilingual Study / الدراسة ثنائية اللغة

Fly GACA is designed to support Arabic-speaking students. Practical suggestions:

- If a concept is clearer in Arabic, ask Adel to explain it in Arabic. The same prompt, in Arabic, can unlock better comprehension.
- For technical terms, learn both the English and Arabic forms — your practical flying will use English phraseology, but written exam questions may appear in either language depending on your exam authority.
- The GACAR regulations are the authoritative Arabic text — some definitions read more precisely in Arabic than in English translation. If you are uncertain about a definition, compare both versions in the Library.

Managing Motivation Over 12 Weeks / إدارة الدافعية على مدى 12 أسبوعًا

Solo self-study is hard because there is no classroom accountability. Practical approaches:

Set a booking date as a target. Talk to your FTO early; agree a rough target date for your theoretical knowledge exam. A real deadline changes how you study.

Log your quiz scores. Keep a simple spreadsheet or notebook: date, module, score. Watching the numbers climb is motivating. Watching a flat score tells you where to spend more time.

Find a study partner. Even one other student preparing for the same exam — even remotely — provides accountability, someone to quiz you, and someone to share good Adel prompts with.

Celebrate phase milestones. Finishing Phase 1 is real progress. Phase 2 completion means you have covered the bulk of the syllabus. Acknowledge these moments.

When you get stuck: Do not stay stuck alone. Ask Adel for a different explanation. Look in the Library for a different angle. If a concept genuinely won't click after three approaches, ask your FTO instructor — that is a good use of instructor time.

Part 5 — Quick Reference: Nine Modules × Five Product Sections

الجزء الخامس — مرجع سريع: تسعة موضوعات × خمسة أقسام

Module	Ground School Lessons	Captain Adel Role	Library Resource	Flight Tool	Quiz Bank
Air Law	AL-1 to AL-4	Explain GACARs, airspace, VFR rules, licensing	GACAR Part 61, Part 91, Foreword	Airspace Structure, VFR Card	Air Law
Meteorology	MET-1 to MET-4	Explain atmosphere, hazards, METAR/TAF	Met handbooks, GACAR Part 91 wx minima	—	Meteorology
Navigation	NAV-1 to NAV-4	Explain DR, 1-in-60, VOR/NDB, E6B method	AIP Saudi Arabia (chart section)	E6B, Chart Symbols	Navigation
Aircraft General Knowledge	AGK-1 to AGK-4	Explain systems, instruments, engine	POH structure (Library)	—	Aircraft Knowledge
Principles of Flight	POF-1 to POF-4	Explain lift, drag, stability, stall	GACAR Part 91 operating limits	—	Principles of Flight
Flight Performance & Planning	FPP-1 to FPP-4	Work performance problems, fuel calc	GACAR Part 91 fuel requirements	Weight & Balance, E6B	Flight Performance
Human Performance	(current lesson set)	Scenario-based decision making	GACAR (operational limits)	—	Human Performance
Operational Procedures	(current lesson set)	ATC comms role-play, emergency procedures	AIP Saudi Arabia (phraseology)	—	Operational Procedures
Communications & ATS	(current lesson set)	Phraseology, ATC services explained	AIP Saudi Arabia	—	Communications

Closing — Before You Rely on Anything Operationally

الخاتمة — قبل الاعتماد على أي شيء في العمليات الفعلية

Fly GACA has helped you build knowledge. But knowledge from a study platform — any study platform — is preparation for decisions, not the basis for decisions.

Before your real written exam:

- Confirm the current syllabus, pass mark, format, and permitted materials with your FTO and with GACA directly.
- Ensure your mock exam results reflect genuine understanding, not familiarity with the question patterns.
- Check that all other PPL requirements (medical, hours, English proficiency) are progressing on schedule.

Before you rely on anything operationally:

- Verify every regulation you recall studying against the current GACAR text in the Library or — better — on the GACA official website.
- Obtain current weather from official SADIS/ATIS/MET sources, not from memory of a textbook explanation.
- File flight plans, obtain clearances, and check NOTAMs through official channels.
- Your flight instructor, your FTO, and GACA are your authorities. This platform is your study preparation.

You are building toward something real. The Saudi PPL is a serious qualification that will take you to real skies over real terrain. The knowledge you are building in ground school is the foundation of decision-making you will use as a pilot for the rest of your flying life. Study it seriously, verify it rigorously, and fly it safely.

حظًا موفقًا — Good luck. The skies are worth it.

Fly GACA — Independent Educational Platform for Saudi Civil Aviation Not affiliated with GACA. Educational use only. Always verify with GACA and your approved FTO. Version 2026-06-16 / Primary: English | Arabic parity: bilingual headings throughout
