

Fly GACA — Master Paperwork & Template Index

SECTION 00-strategy

TYPE template

STATUS **active**

OWNER Founder

UPDATED 2026-08-20

Generated: 2026-06-14

Scope: All back-office documents across buckets 00–11 (plus `library/06-product-eng/`). Excludes the regulatory corpus in `library/` (GACAR, FAA, ICAO, GACA PDFs) — that is a separate catalogue.

Format key: `.docx` = editable Word template · `.xlsx` = Excel tracker · `.md` = Markdown reference doc · `.pdf` = final/rendered · `.html` = rendered dashboard · `.png` = brand asset · `.psd` = Photoshop source · `.gsheet` = Google Sheets stub · `.csv` = data file

Gaps, Issues, and Recommendations

GAP-1 — 06-product-eng physical location is split (HIGH)

The `06-product-eng/` top-level bucket folder contains only an empty `diagrams/` subfolder. All 25 product/engineering documents actually live in:

- `library/06-product-eng/` (canonical copies)
- `flygaca/office/` (working copies in the code repo, partially duplicated)

This creates a risk of divergence and confusion. The `README.md` describes `06-product-eng/` as the home, but that is not where the files are.

Recommendation: Move all files from `library/06-product-eng/` into `06-product-eng/` and reconcile duplicates in `flygaca/office/` (keep symlinks or a reference, not full copies). The `library/` folder should contain regulatory corpus only, not engineering docs.

GAP-2 — 06-product-eng: missing spec-currency-tracker.md (MEDIUM)

The currency tracker (Psalms of Currency in the Book; central retention feature per the action plan) has no dedicated product spec. There are specs for the CRM, instructor dashboard, and freshness pipeline, but not for the feature the action plan calls the single most important post-exam retention mechanism.

Recommendation: Add `spec-currency-tracker.md` to the 06-product-eng bucket.

GAP-3 — 06-product-eng: missing spec-captain-adel-refusal-protocol.md (MEDIUM)

The action plan identifies the AI hallucination risk as existential and defines a specific refusal/fallback protocol ("refuse and redirect when retrieval confidence is low; surface retrieved snippet, not just citation link"). This is not codified as a spec, only referenced in the action plan and partially in Book V.

Recommendation: Add `spec-captain-adel-refusal-protocol.md` encoding the exact fallback behaviour, confidence threshold approach, and what "redirect to GACA" looks like in UI.

GAP-4 — 09-investor-relations: no pitch deck (MEDIUM)

The investor relations bucket has a DDQ, FAQ, update template, and target list — but no pitch deck. For a platform at pre-seed that is actively seeking investment, the deck is typically the primary IR artefact.

Recommendation: Add `Pitch Deck.pdf` (or a link to a Canva/Slides source). Even a placeholder stub is better than the gap.

GAP-5 — 10-academy-curriculum: no content curriculum for individual (B2C) pilots (MEDIUM)

The curriculum documents focus on B2B academy partnerships (curriculum matrix, Captain Adel map, cadet welcome pack). There is no individual learner curriculum or suggested study path for the B2C solo-study user.

Recommendation: Add `Self-Study Curriculum Guide.docx` — a suggested GACAR study path for self-study pilot candidates (PPL, CPL tracks).

GAP-6 — 00-strategy: no competitor analysis artefact (LOW)

The GTM bucket has `strategy-competitive-teardown.md` but the strategy bucket has no companion document analysing competitors from a product/positioning angle (what they charge, where they are weak, how Fly GACA wins). The teardown is marketing-oriented; a product-level competitor map is a different artefact.

Recommendation: Add `Competitor Landscape.docx` to 00-strategy, or promote the teardown with a product lens.

GAP-7 — 11-brand: print assets are PNG renders only, no editable source files (LOW CLOSED 2026-07-27)

~~The print collateral (letterheads, business cards, envelopes, etc.) exists only as PNG renders. The original editable files (Figma, Illustrator, or InDesign) are not present.~~

Resolved 2026-07-27. The identity-bearing print assets were rebuilt as **editable HTML source** under `11-brand/print/*.html` (letterheads EN/AR, contract cover, business cards, envelope DL, compliments slip, internal memo, press release), sharing `11-brand/print/brand-print.css` (Palette B) and the **BD& company wordmark** `11-brand/logos/bda-logo.svg` (the Fly GACA *product* logo is the separate `11-brand/logos/fly-gaca-logo.png`). `tools/print/build-html.mjs` renders their PDFs and the new `tools/print/build-png.mjs` regenerates the legacy PNGs at 300 dpi with the current company identity (CR 7030976893 · VAT 311415259500003). Updating a phone/address/email is now a diffable HTML edit + rebuild, not a from-scratch redraw. Assets not yet rebuilt (folder-cover, notepad, sticker-pack, envelope-c5) keep their existing PNGs.

GAP-8 — No data-room index (LOW)

For investor due diligence there is a DDQ and FAQ, but no data-room index that organises which documents go where for investor review. As the document set grows, this becomes a friction point during due diligence.

Recommendation: Add `09-investor-relations/Data-Room-Index.md` listing documents by due-diligence category (corporate, legal, financial, product, commercial).

GAP-9 — `_TRASH-review-and-delete/` folder not confirmed emptied (LOW)

`MOVED.md` notes this folder should be emptied in Finder. Its current state is unconfirmed.

Recommendation: Confirm deletion and remove the folder reference from README once done.

Index generated 2026-06-14. Next recommended review: when any bucket gains or loses documents, or at the monthly close.
