UPDATED 2026-07-03

The operational counterpart to the strategy in [03-finance/monetization.md](#). Schools are the only revenue line that can be invoiced **today** (manual ZATCA e-invoice + admin licence grant) — this playbook is how that motion runs until online checkout opens, and after.

Offer

Seat-based annual licensing: the school buys N cadet seats, every cadet gets full Fly GACA Pro, and the school gets the admin dashboard (cohort exam-readiness, per-cadet progress). Annual contracts, minimum **10 seats**, ZATCA-compliant invoicing.

Seats	SAR / seat / year
10–24	299
25–74	249
75+	199

Founding-partner offer (first 2–3 schools only): SAR 199/seat flat for year 1, in exchange for (a) permission to use the school's name/logo, (b) a short case study after one term, and (c) a monthly feedback call. Renewal at the standard tier.

Target list (build and qualify)

Start with GACAR Part 141 certificated academies and training-heavy operators:

- OxfordSaudia Flight Academy (Dammam / King Fahd Intl) — the scale anchor
- Saudi Aviation Academy / academy programmes around Riyadh and Jeddah
- Aviation technical colleges and cadet programmes feeding Saudia/flynas/flyadeal
- Charter/AOC operators with recurrent-training needs (smaller seat counts, steadier renewals)

Qualify on: cadet cohort size, written-exam pass pressure, English/ELPT needs, and whether instructors currently track readiness manually.

Outreach sequence

1. **Warm intro or direct email** to the Head of Training — one paragraph: every cadet gets the GACAR library, cited AI answers, mock exams and a logbook; the school sees who is ready and who is falling behind. Link [schools.html](#).

2. **Demo (30 min)** — live walk through Captain Adel (cited answers), a timed mock exam, and the readiness view. Offer a **2-week free cohort pilot** (launch mode makes this free to run today).
3. **Quote** — seats × tier from the card above, on letterhead, validity 30 days. State what a seat includes and the dashboard.
4. **Close** — signed order form → invoice (below) → seats granted within 1 business day.

Invoice → grant flow

1. Issue a ZATCA-compliant (Fatoora) e-invoice for the contract total; payment by bank transfer. Keep the invoice number in the deal record.
2. Collect the cadet roster (emails) from the school admin.
3. Grant seats with the admin-only callable in `functions/school.js`: `grantSchoolLicence({ emails, schoolId, expiresAt })` — writes `plan: 'school'` entitlements server-side (clients can never self-grant; see `firestore.rules`).
4. Mid-year roster changes: revoke a graduate with `revokeSchoolLicence({ emails })`, grant the replacement — seat counts stay within the contract.
5. At renewal: re-invoice, then re-grant with the new `expiresAt`.

Lifecycle

Run the standard CS playbooks against every school account:

- Week 0–4: [Onboarding](#) — roster loaded, instructors trained on the dashboard, >80% cadet activation.
- Ongoing: [health scoring](#) on adoption (active vs. licensed seats), exam outcomes, instructor logins.
- T-90 days: [Renewal](#) — lead with the readiness data the dashboard collected all year.
- Expansion: [Expansion playbook](#) — new cohorts, ELPT pack add-ons for the school, the Instructor Dashboard when it ships.

KPIs

- Pipeline: contacted → demo → pilot → signed (track conversion at each step)
- Seats sold; active vs. licensed seats (>80%)
- Renewal rate (>95% target per `customer-success.md`)
- Time from signed order to all-seats-granted (<2 business days)
