

Company facts — BDA Company International

(شركة بدع الدولية)

SECTION 01-governance TYPE document STATUS **active** OWNER Founder UPDATED 2026-08-25

Single-page reference for the registered legal entity that operates Fly GACA (flygaca.com) and Captain Adel (captadel.com). **This file is the source of truth for company identity** — every other document references these values instead of restating them. Pattern follows `06-operations-it/hosting-facts.md`.

Source documents: Ministry of Commerce CR certificate, ZATCA VAT registration certificate (28/11/2025), SiFi IBAN certificate (26/07/2026) — filed in the founder's records.

Legal identity

Field	Value
Legal name (Arabic)	شركة بدع الدولية
Legal name (English, as on the CR)	BDA Company International
Entity type	Limited liability company (شركة ذات مسؤولية محدودة)
Unified national number / CR	7030976893
CR issued	23/09/2022 · Status: Active
Registered address	Riyadh, Al Baqqal district 12965 (الرياض، حي البقال)
Trade names / products	Fly GACA (flygaca.com) · Captain Adel (captadel.com)

Spelling note: the bank's IBAN certificate transliterates the name as "Beda International Company". The CR's English rendering — **BDA Company International** — is the one used in all legal copy, contracts and websites.

Tax (ZATCA)

Field	Value
VAT registration number	311415259500003
Effective registration date	2025-11-01
Tax period	Quarterly

Field	Value
First filing due	2026-01-31 — see <code>03-finance/invoicing-and-vat-returns.md</code> (overdue action)
TIN	3114152595

Banking

Field	Value
Bank	Arab National Bank (via SiFi — Alhulul Almobassatah Financial Co.)
Account name	Beda International Company (bank spelling)
IBAN	SA4930100806623389733294
Account number	806623389733294

Hard rule — the IBAN and account number never leave this repo. They are recorded here and in `00-strategy/phase0.md` (P0-3) only. They must never appear in the product repos (`ay2m/FlyGACA` , `ay2m/Captain-Adel`), on any website, or in any public document. Customer-facing invoices carry the bank details on the invoice itself, generated at billing time.

Where the identity appears publicly

Surface	What is shown	Where it lives
flygaca.com footer	Operator line: name AR/EN + CR + VAT + Riyadh	<code>ay2m/FlyGACA: src/i18n/*.json</code> (<code>footer.legalEntity</code>) + <code>src/app/Footer.tsx</code>
flygaca.com /terms, /privacy	Entity block, PDPL controller, Riyadh jurisdiction	<code>ay2m/FlyGACA: src/i18n/*.json</code> (<code>legal.*</code>)
flygaca.com structured data	<code>legalName</code> , address, SA-CR identifier, vatID	<code>ay2m/FlyGACA: src/lib/seo/jsonld.ts</code> + <code>index.html</code> + <code>scripts/prerender-head.mjs</code>
captadel.com footer (all pages)	Operator line AR/EN	<code>ay2m/Captain-Adel: public/assets/js/footer.js</code>
captadel.com /terms, /privacy	Entity block, PDPL controller, Moyasar processor	<code>ay2m/Captain-Adel: public/terms.html</code> , <code>public/privacy.html</code>
Repo metadata	LICENSE holder, package.json author, SECURITY.md	both product repos

Never published: IBAN / bank account (see hard rule above), founder's national ID, signed contracts.

The machine-readable mirror

Those surfaces are hand-maintained copies, so the values above are also mirrored into

`contracts/flygaca-family.json` — the family contract committed byte-identically to this repo, `ay2m/FlyGACA` and `ay2m/Captain-Adel`. This document remains the source of truth; the manifest is the artifact CI can actually read.

Three gates keep them in step, one per repo:

Repo	Gate	What it asserts
this repo	<code>node tools/print/check-facts.mjs</code> (in <code>docs-check.yml</code>)	every manifest <code>entity</code> value matches the tables above — and that the IBAN and account number are absent from the manifest, since it travels to both product repos
<code>ay2m/FlyGACA</code>	<code>tests/family-contract.test.ts</code> (in <code>npm run verify</code>)	the values appear verbatim in <code>src/lib/seo/jsonld.ts</code> and <code>footer.LegalEntity</code> in both i18n bundles
<code>ay2m/Captain-Adel</code>	<code>test/family-contract.test.js</code> (in <code>npm run test:unit</code>)	the values appear verbatim in <code>footer.js</code> , <code>terms.html</code> , <code>privacy.html</code> , <code>package.json</code> and <code>LICENSE</code>

Changing a value here is therefore a five-file, three-repo change. Edit this document, update `contracts/flygaca-family.json`, bump its `version` and re-stamp its hash (`node tools/contracts/stamp-manifest.mjs contracts/flygaca-family.json`), copy the manifest verbatim into both product repos, update the product-repo copies of the string, and open all three PRs together. Each repo's gate fails until its own half is done.

Decisions this registration settles

- **B2 (legal structure):** LLC — settled by the CR (owner-decision-brief 2026-07).
- **B3 (VAT timing):** registered, effective 2025-11-01, quarterly — settled by the ZATCA certificate.
- **MISA:** not required — 100% Saudi-owned LLC, no foreign investment license needed (see `04-compliance-ksa/compliance-roadmap.md`).
- `flygaca.sa` registration is now **unblocked** (SaudiNIC needs a legal entity).

Rollout tracker — where the identity still needs to land

Done in this pass (2026-07-27): product repos (footers, legal pages, JSON-LD, repo metadata), `phase0.md` P0-3, compliance/status docs, the `.docx` contract and policy set (placeholders `[CR_NUMBER]` / `[COMPANY_ADDRESS]` and the retired identities "Fly GACA Saudi Arabia (LLC)" / "trading as" replaced).

Still open:

- ☐ Saudi counsel review of the public policy drafts in `02-legal/` — the "do not publish" banners stay until cleared.
- ☐ Moyasar (both products): confirm each merchant profile carries the CR + settlement IBAN, and validate the webhook HMAC recipe against a dashboard test event before relying on it (see captadel RUNBOOK §3).
- ☒ Brand print assets — **done 2026-07-27**: rebuilt as editable HTML under `11-brand/print/*.html` (Palette B), PNGs regenerated at 300 dpi with the CR/VAT identity line (GAP-7 closed). The ZATCA tax-invoice template is at `03-finance/tax-invoice-template.html`.
- ☐ Google Sheet master index (`00-master-office-paperwork-index.gsheet`) — manual paste of the new/renamed docs.
- ☐ Register `flygaca.sa` (now unblocked).
- ☐ ZATCA Fatoora e-invoicing wave check now that a real VAT number exists.
