

Claude Marketplace Skills — Evaluation & Recommendations

SECTION root TYPE document STATUS **active** OWNER Founder UPDATED 2026-08-31

Why this document exists

A viral X thread (@SON_IA, building on @silvanrec) catalogued Anthropic's official Claude plugin marketplace by department and pitched it as a way to "run departments of a company on Claude." That thread is promotional content, not a technical source, so nothing below is copied from it. Instead, this evaluation was built from the actual marketplace catalog (Anthropic's `knowledge-work-plugins` marketplace, queried directly — skill counts below match the thread's claimed 8 / 31 / 9, which at least confirms the thread described the real catalog) and from what this repository actually is.

What this repo actually is, and why that matters for the verdict below. `iflygaca/Office` is a git-versioned tree of Markdown, `.docx` / `.xlsx`, and rendered PDFs — not a live operating system. There is no QuickBooks, Stripe, PayPal, Square, HubSpot, DocuSign, or Canva connection anywhere in this repo (checked — none referenced), and the "CRM" and payroll/currency-tracker documents under `06-operations-it/` are **specs**, not connected systems. Most of the marketplace's Small Business skills are built to act *through* exactly those connectors (chase a real invoice, clean a real CRM, run a real payroll cycle). Installed here, with nothing behind them, they're just prompt templates — no more capable than describing the task to Claude directly. Separately, this repo already runs a 25-agent roster (`.claude/agents/`) purpose-built for its own conventions — `finance-steward`, `legal-scribe`, `governance-clerk`, `ksa-compliance`, `people-ops`, `ops-it-spec` — each of which knows the Falcon Theme print pipeline, the bilingual `ar/` mirror, PDPL/ZATCA/MISA (not SOX — this is a private Saudi company, not a US public one), and the sensitive-content handling rules the generic marketplace skills know nothing about. Because of both of these, the honest read is that **most of the 48 skills evaluated add little here**; a small number are genuinely useful as a second-opinion drafting pass, called out below.

How to read the verdict column:  Recommend = worth enabling and using in this repo's context.  Situational = only useful once a precondition holds (a real connector, a live audit, a specific one-off need) — not worth enabling by default.  Skip = wrong fit for this repo (needs a connector we don't have, assumes a legal/regulatory regime that doesn't apply, or duplicates a territory agent that already does this better with local context).

Installing

All three plugins live in Anthropic's first-party `knowledge-work-plugins` marketplace at claude.com/plugins/finance, claude.com/plugins/small-business, and claude.com/plugins/legal — install (or check status) via the **Add** button on those pages, or **claude.ai** → **Settings** → **Capabilities**

→ **Plugins.** This is a different mechanism from the `flygaca-family` marketplace this repo hosts itself (see `06-operations-it/runbooks/runbook-claude-plugins.md`): `flygaca-family` is a GitHub-hosted marketplace added with `/plugin marketplace add iflygaca/Office`, while `knowledge-work-plugins` is an Anthropic-hosted catalog with no public git source to point `/plugin marketplace add` at — install it through the claude.ai UI, not the CLI. As of this evaluation, `finance`, `small-business`, and `legal` (plus `operations` — see below) already show as **enabled** on the connected claude.ai account; that toggle is account-wide, not scoped to this repo, so confirm in your own plugin settings rather than assuming it carries over to a teammate's session. A plugin installs as a whole — there's no way to enable one skill from `small-business` without pulling in all 31.

Each plugin also wants MCP connectors (QuickBooks/Stripe/PayPal/HubSpot/DocuSign/Canva for Small Business; BigQuery/Snowflake/Databricks for Finance; Atlassian/Box/Egnyte/DocuSign for Legal) to do anything beyond producing a generic document — none are configured for this repo, and connecting them is a decision for the owner, not something to do as part of a docs-repo skill evaluation.

Finance (8 skills) — `claude.com/plugins/finance`

Skill	Verdict	Why
<code>reconciliation</code>	🟡 Situational	Genuinely the right shape of task (matching ledger to bank/ZATCA invoices), but needs a connected ledger or bank feed to reconcile <i>against</i> — there isn't one here. Worth revisiting once one exists.
<code>variance-analysis</code>	🟡 Situational	Closest fit to <code>03-finance/budget-vs-actual-tracker</code> — could be tried as a second-opinion narrative pass over that tracker's numbers, but <code>finance-steward</code> already owns and maintains that document with this repo's own format.
<code>close-management</code>	🟡 Situational	Generic month-end close checklist; only useful once monthly close is a formal recurring process here, which it isn't yet.
<code>financial-statements</code>	🟡 Situational	Drafts P&L/balance-sheet narrative from ledger data; nothing to draft from without a connected ledger.
<code>audit-support</code>	🟡 Situational	Only relevant once an external audit is actually underway.
<code>journal-entry</code> / <code>journal-entry-prep</code>	🚫 Skip	Assumes a live general ledger (QuickBooks-class system) to post entries into. None exists in this repo.
<code>sox-testing</code>	🚫 Skip	Sarbanes-Oxley is a US public-company regime. Fly GACA is a private Saudi (KSA) company — the applicable controls regime is PDPL/ZATCA, owned by <code>ksa-compliance</code> , not SOX.

Small Business (31 skills) — claude.com/plugins/small-business

Skill	Verdict	Why
<code>plan-payroll</code>	🟡 Situational	Payroll planning is real work here (<code>05-people/</code>), but the skill's default framing is generic/US payroll — it doesn't know GOSI, Nitaqat/Saudization quotas, or WPS. Would need heavy adaptation; <code>people-ops</code> and <code>finance-steward</code> already carry that KSA context.
<code>margin-analyzer</code> / <code>price-check</code>	🟡 Situational	Could sanity-check <code>03-finance/monetization.md</code> band pricing as a second opinion; low-stakes to try, low expected value since the bands are already deliberate strategy, not raw margin math.
<code>job-post-builder</code>	🟡 Situational	Could help draft postings alongside <code>05-people/</code> offer-letter and onboarding docs; marginal value over <code>people-ops</code> .
<code>friday-brief</code> / <code>monday-brief</code> / <code>month-heads-up</code>	🟡 Situational	Generic weekly-brief templates; <code>strategy-analyst</code> already produces owner-decision briefs in this repo's format.
<code>quarterly-review</code>	🟡 Situational	Overlaps <code>strategy-analyst</code> 's phase-status/OKR review work.
<code>close-month</code> / <code>month-end-prep</code>	🟡 Situational	Duplicates of Finance's <code>close-management</code> within the same marketplace; same verdict.
<code>cash-flow-snapshot</code>	🟡 Situational	Needs a connected bank/payment feed to snapshot; none configured.
<code>contract-review</code>	🟡 Situational	Duplicate of Legal's <code>review-contract</code> (see below), bundled again in this plugin.
<code>review-contract</code>	🟡 Situational	Same skill name as Legal's, see the Legal section for the actual recommendation.
<code>business-pulse</code>	🔴 Skip	Needs connected data sources (sales, support, finance feeds) to produce a "pulse"; this repo holds static documents, not live metrics.
<code>call-list</code>	🔴 Skip	Sales-call list generation belongs to GTM outreach (<code>07-gtm/</code> , <code>schools-acquisition</code> agent), not this evaluation's scope, and needs a live lead source.
<code>canva-creator</code>	🔴 Skip	Brand assets go through <code>11-brand/</code> 's Falcon Theme pipeline and <code>brand-keeper</code> , not Canva.
<code>content-strategy</code>	🔴 Skip	Owned by <code>seo-strategist</code> /GTM agents; out of Finance/Legal/Ops scope.
<code>crm-cleanup</code> / <code>crm-maintenance</code>	🔴 Skip	No CRM connector exists; the CRM material in <code>06-operations-it/</code> is a product spec, not a live system to clean.
<code>customer-pulse</code> / <code>customer-pulse-check</code>	🔴 Skip	<code>customer-success</code> agent already owns NPS/health-scoring in <code>08-customer-success/</code> ; needs live customer data this repo doesn't hold.
<code>handle-complaint</code>	🔴 Skip	Needs a live support-ticket connector; the process is already documented in prose in <code>08-customer-success/</code> .

Skill	Verdict	Why
<code>invoice-chase</code>	❌ Skip	Needs a live invoicing/payment connector (Stripe/PayPal/QuickBooks); ZATCA invoicing here is template-based (<code>03-finance/tax-invoice-template.html</code>), not a live payable/receivable system.
<code>lead-triage</code> / <code>sales-brief</code>	❌ Skip	Need a live CRM/pipeline feed; <code>07-gtm/b2b-pipeline</code> is a document, not a system.
<code>run-campaign</code>	❌ Skip	Needs live ad/email connectors; owned by GTM agents when it becomes relevant.
<code>smb-onboard</code> / <code>smb-router</code>	❌ Skip	Meta-skills for routing within this plugin itself — not content, nothing to adopt.
<code>tax-prep</code> / <code>tax-season-organizer</code>	❌ Skip	Framed around US "tax season"; KSA VAT/ZATCA compliance is a different shape of problem, already owned by <code>04-compliance-ksa/zatca-phase-2-e-invoicing.md</code> and <code>finance-steward</code> .
<code>ticket-deflector</code>	❌ Skip	Needs a live support-ticket connector.

Legal (9 skills) — claude.com/plugins/legal

Skill	Verdict	Why
<code>review-contract</code>	✅ Recommend (as a second opinion)	Genuinely useful for a fast, generic first pass on vendor/pilot agreements before <code>legal-scribe</code> 's KSA-aware drafting — but never as a substitute for it: this skill has no PDPL or Saudi-law context, so treat its output as a checklist prompt, not final legal judgment.
<code>triage-nda</code>	✅ Recommend (as a second opinion)	Fast first-pass triage of inbound NDAs (school pilots, vendor NDAs) against <code>02-legal/</code> templates before <code>legal-scribe</code> finalizes. Low risk since it's triage, not execution — nothing it produces should be signed without review.
<code>vendor-check</code>	🟡 Situational	Overlaps <code>03-finance/procurement.md</code> and the <code>operations</code> plugin's <code>vendor-review</code> skill (see below) — worth trying once, redundant if either of those is already in use.
<code>legal-risk-assessment</code>	🟡 Situational	Generic risk-severity triage; overlaps the risk registers already maintained in <code>01-governance/</code> and <code>09-investor-relations/risk-register.md</code> .
<code>legal-response</code>	🟡 Situational	Drafts responses to legal requests; a reasonable first-draft scaffold, but <code>legal-scribe</code> should still own final language given the sensitive-content handling this repo requires.
<code>brief</code> / <code>meeting-briefing</code>	🟡 Situational	Generic meeting-prep briefing generator; could assist <code>governance-clerk</code> 's board-pack assembly, marginal value over what that agent already does.
<code>compliance-check</code>	🟡 Situational	Generic compliance-check playbook with no PDPL/ZATCA/MISA awareness — <code>ksa-compliance</code> is the better tool for anything Saudi-regulatory; only useful as a rough first pass on non-KSA-specific policy gaps.

Skill	Verdict	Why
signature-request	 Skip	Needs a DocuSign-class e-signature connector, not configured in this repo.

A discovery worth flagging (not one of the three requested sources)

The same catalog query surfaced an `operations` plugin (`claude.com/plugins/operations` , 9 skills: `vendor-review` , `process-doc` , `runbook` , `compliance-tracking` , `risk-assessment` , `change-request` , `capacity-plan` , `status-report` , `process-optimization`) that fits `06-operations-it/` — vendor evaluation and runbook drafting in particular — arguably better than most of the 31 Small Business skills do. It wasn't one of the three sources named for this evaluation, so it isn't formally recommended here, but it's worth a look if the owner wants to extend this evaluation.

Bottom line

Two skills are worth actually turning on and using: `legal:review-contract` and `legal:triage-nda` , both strictly as a second-opinion first pass ahead of `legal-scribe` , never as a substitute for it. Everything else is either blocked on a connector this repo doesn't have, assumes a regulatory regime (SOX, US tax season) that doesn't apply to a private KSA company, or duplicates ground a territory agent already covers with this repo's own conventions. That's a much narrower result than "run three departments on Claude" — which is what a promotional thread would say regardless of fit.
