

Hosting facts (PDPL boundary, regions, domains)

SECTION 06-operations-it TYPE document STATUS **active** OWNER Founder UPDATED 2026-06-16

Single-page reference for hosting decisions confirmed in PHASE0 / resume-briefing (Drive, as of 2026-05-23). Use this before reaching for the longer planning docs.

Domains

Domain	Status	Notes
<code>flygaca.com</code>	Owned, canonical	The main product.
<code>captadel.com</code>	Owned (secured 2026-05-23)	Captain Adel's marketing / standalone front door. Registrar not yet recorded — write it in here when known.
<code>flygaca.sa</code>	Deferred until P0-3	Saudi-NIC review needs the legal entity to exist; the "gaca" substring may also trigger review.

PDPL data boundary — the load-bearing rule

All personal data — accounts, profiles, the logbook, **real user queries** — stays in the Kingdom (Firestore `me-central2` / Cloud Functions). Public corpus work can happen on the EU VPS. — `phase0.md`, P0-6

That makes the choice unambiguous:

What	Where	Why
Firestore	<code>me-central2</code> (Dammam)	In-Kingdom, native mode.
Cloud Functions (Fly GACA gateway)	<code>me-central2</code> (Dammam)	Receives personal data (user queries).
Captain Adel service (captadel)	<code>me-central2</code> (Dammam)	Real user queries → personal data under PDPL. Anything west of Dammam is not in-Kingdom.
Public corpus pipeline / RAG indexing / evals / staging	EU VPS (Paris) — Hostinger	Public data only ; explicitly never personal data.
ALLaM GPU endpoint	KSA / in-Kingdom GPU host	Same reason as captadel — see <code>captadel/deploy/allam-vllm.md</code> .

"me-central1" (Doha, Qatar) is **not** in-Kingdom. Earlier doc wording that says "Cloud Run me-central1 / Kingdom box" should read `me-central2` (Dammam) per the policy above. Treat `me-central2` as the canonical answer.

GCP / Firebase

Item	Value
Firebase / GCP project ID	<code>flygaca-firebase</code> (replaced <code>flygaca-com</code> ; an empty <code>fly-gaca-495116</code> project also exists — delete later)
Web app config	<code>assets/js/firebase-config.js</code>
Firestore	Native mode, <code>me-central2</code> (to be created)
Billing	Spark today; Blaze required for Cloud Functions (Phase 2)
Captain Adel service host	Cloud Run, <code>me-central2</code> (per PDPL above)

EU VPS (Paris) — public-data box

Item	Value
Provider	Hostinger KVM 2 (2 vCPU / 8 GB / 100 GB)
IP	72.62.20.20
Hostname	srv1209075.hstgr.cloud
Region	Paris, Île-de-France (Hostinger, AS47583)
OS	Ubuntu 24.04 LTS, hardened (SSH key-only, ufw, fail2ban)
Role	RAG indexing / eval harness / staging — public data only

GitHub

Item	Value
Org	<code>github.com/FlyGACA</code>
Monorepo	<code>github.com/FlyGACA/flygaca</code>
Captain Adel (planned standalone)	<code>github.com/FlyGACA/captadel</code> — see <code>office/runbook-captadel-extraction.md</code>
