Purpose

This playbook defines how the Fly GACA Customer Success team detects, triages, and recovers accounts showing churn risk. The goal is to keep churn < 5% and convert at-risk accounts back to a Healthy health band.

It is triggered automatically whenever a customer's composite health score falls into the **At-Risk** band (0–59) per [docs/customer-health-scoring.md](#), or when any early-warning signal below is observed.

Early-Warning Signals

Signal	Source	Severity
Login frequency down > 30% quarter-over-quarter	Product usage	High
Key champion or accountable manager departs	CRM / engagement	High
Missed a GACA compliance deadline while on the platform	Compliance module	Critical
Two or more severity-1 support tickets in a month	Support	High
NPS detractor (0–6) or CSAT drop	Sentiment	Medium
Adoption rate falls below 80% of licensed seats	Product usage	Medium
Invoice > 30 days past due	Financial	Medium

Risk Segmentation

Tier	Definition	Owner	Response SLA
Critical	Health < 40, or compliance deadline missed	CSM + CS Lead	< 2 hours
High	Health 40–59, or champion departure	Assigned CSM	< 1 business day
Watch	Neutral band (60–79) drifting down	Assigned CSM	< 3 business days

Intervention Strategies

1. **Diagnose** — review the health-score breakdown to find the weakest dimension(s); pull usage, support, and sentiment history before reaching out.

2. **Reconnect** — schedule a call with the accountable manager / compliance officer; acknowledge the issue directly.
3. **Re-anchor on value** — restate the compliance and audit-readiness outcomes the customer originally bought (avoided findings, audit prep time saved).
4. **Remove blockers** — escalate open severity-1 tickets, schedule refresher training, fix adoption gaps on core modules.
5. **Commit to a recovery plan** — document specific actions, owners, and dates; set a follow-up health-score review in 30 days.

Save Campaigns

- **Adoption rescue:** targeted enablement for accounts whose `usage` dimension is the weakest — re-onboard new users, run a compliance-tracking workshop.
- **Executive bridge:** for champion loss, secure a new executive sponsor and re-map stakeholders (accountable manager, safety manager, compliance officer).
- **Compliance assurance:** for missed-deadline risk, run a deadline audit and configure proactive reminders so no future GACA obligation is missed.

Win-Back Program

For accounts that have churned:

- Conduct an exit interview within 2 weeks of departure.
- Tag the root cause and add the account to a 90-day nurture sequence.
- Re-engage when the original blocker is resolved (e.g., new pricing tier, new feature, regulatory change) with a tailored return offer.

Exit Interviews & Root-Cause Analysis

- Run a structured exit interview for every churn (voluntary or non-renewal).
- Classify root cause: value, adoption, support, price, product gap, or champion/sponsor change.
- Feed themes into the monthly CS review and the product feedback loop; update this playbook's prevention steps when a recurring cause emerges.

Success Metrics

Metric	Target
Gross churn rate	< 5%
At-risk accounts recovered to Neutral+ within 90 days	> 60%

Metric	Target
First response time on Critical risk	< 2 hours
Save-campaign success rate	> 50%
