

Onboarding Playbook

SECTION 08-customer-success TYPE playbook STATUS **active** OWNER Founder

UPDATED 2026-07-03

Purpose

This playbook defines how Fly GACA onboards a new B2B customer (flight school / ATO, charter operator, MRO, or commercial operator) from signed contract to first realized value. The goal is fast time-to-value, strong early adoption (> 80% of licensed seats active), and a healthy first health score within 90 days.

Success Criteria

Milestone	Target
Kickoff held	Within 5 business days of signature
Admin + first cohort provisioned	Day 14
Adoption (active vs. licensed seats)	> 60% by Day 30, > 80% by Day 90
First value milestone reached	Day 60
First health score in Healthy/Neutral band	Day 90

Stakeholder Mapping

Role	Interest
Sponsor (Head of Training / Ops)	Outcomes, ROI, accountability
Admin / champion	Day-to-day rollout, seat management
End users (cadets, pilots, instructors, technicians)	Study, tools, library, currency

30 / 60 / 90-Day Plan

Days 0–30 — Launch

- Kickoff call: confirm goals, success criteria, and timeline.
- Provision the account; map seats to cohorts/roles.
- Admin enablement + first end-user training session.
- Configure currency tracking and relevant library/tool access.

- Establish the communication cadence and escalation path.

Days 31–60 — Adopt

- Drive adoption to target across the first cohort.
- Run a tools/study workshop; share best practices and use cases.
- Review early usage; close adoption gaps proactively.
- Confirm the first value milestone (e.g., cohort study progress, exam prep).

Days 61–90 — Realize

- Demonstrate value against the agreed success criteria.
- Compute the first [health score](#).
- Transition to the steady-state CS cadence (QBRs, ongoing check-ins).
- Identify early expansion signals (see [expansion playbook](#)).

Resources

- Training schedule and recordings
- Admin and end-user documentation / knowledge base
- Sample success plan and milestone tracker
