

Fatoora e-invoicing — phase & software decision (2026-07)

SECTION 04-compliance-ksa TYPE document STATUS **active** OWNER Founder
UPDATED 2026-07-28

Current decision note that sits on top of the detailed [04-compliance-ksa/zatca-fatoora-e-invoicing-compliance-pack.docx](#) (v1.0, May 2026). That pack is still the technical reference (UBL 2.1, cryptographic stamp, certificate procurement, APIs) — but it was written **before** the VAT registration was real and assumes an early integration wave. This note corrects the timing and locks the software call now that the entity exists (VAT 311415259500003, **TIN 3114152595 already issued**).

Decision 1 — which phase applies now

- **Phase 1 (Generation) is the live obligation.** Every invoice must be a structured, compliant e-invoice — Arabic seller name, VAT/CR, sequential number, line items with 15% VAT, and the **QR (TLV)** on simplified (B2C) receipts. This applies from the first real invoice.
- **Phase 2 (Integration) is NOT yet mandatory for us.** ZATCA assigns Phase 2 in **waves by annual taxable revenue** and notifies each taxpayer **≥ 6 months ahead**. A newly-registered micro-entity below the current wave thresholds is not in scope until notified. **Do not integrate early** — the pack's "go live in Q2 2027 ahead of Wave 8" is over-eager and rests on a stale threshold. **Action:** re-check the latest announced wave thresholds on [zatca.gov.sa/fatoora](#) and act only on ZATCA's official wave notification.

Decision 2 — software

- **Use a ZATCA-compliant e-invoicing solution from the first invoice** — the hand-editable [03-finance/tax-invoice-template.html](#) (with its TLV) is a **manual/interim aid** for one-off B2B invoices, not a compliant Phase-1 *generator* for volume, and it does **not** render the certified QR.
- **Decision: Qoyod** for launch ($\approx$ 200–500 SAR/mo) — Arabic-first, ZATCA Phase-1 compliant, generates the compliant QR. **Zoho Books** is the fallback/scale option. (Same recommendation as the pack — confirmed.)
- Wire **Moyasar** → **automatic simplified e-invoice** on payment so B2C receipts are compliant without manual work; B2B (school) invoices are issued from Qoyod as standard tax invoices.

What is already in place (this repo)

- Phase-1 tax-invoice template with the mandatory fields + TLV, and a **Standard (B2B)** / **Simplified (B2C)** mode toggle — `03-finance/tax-invoice-template.html`.
- Quarterly VAT-return worksheet + filing runbook — `03-finance/vat-return-worksheet.html`, `03-finance/invoicing-and-vat-returns.md`.

Corrections to the pack's action plan

Pack (May 2026)	Reality (2026-07)
"Q3 2026: register with ZATCA, obtain TIN"	Done — VAT registered 2025-11-01, TIN 3114152595.
"Select Qoyod for Phase 1"	Confirmed — adopt now, before invoice volume.
"Q2 2027 go-live ahead of Wave 8"	Revised — Phase 2 only on ZATCA wave notification; re-verify thresholds, don't integrate early.

Owner actions

1. Subscribe to **Qoyod**; configure the seller profile (Arabic name, VAT, CR, address, logo) and the invoice series.
2. Wire **Moyasar** → **Qoyod** so paid subscriptions emit a compliant simplified e-invoice automatically.
3. Re-verify the current Phase-2 wave thresholds on `zatca.gov.sa/fatoora`; record the result and watch for an official notification.
4. Keep the pack as the integration playbook for when Phase 2 is notified (certificates, sandbox, clearance/reporting APIs).
