

Agent Effectiveness Dashboard — Phase 5 Metrics

SECTION 06-operations-it TYPE template STATUS active OWNER Operations Lead

UPDATED 2026-08-26

Version: 1.0 | Effective: 2026-08-26 | Tracking Period: Weeks 1–12

Purpose. Track weekly agent invocations, effectiveness, and team adoption during Phase 5 (Live Execution & Team Scaling). This dashboard feeds the monthly deep-dive review and the agent effectiveness score calculation. Update every Monday with the prior week's data.

Weekly Invocation Log

Track each agent use: who invoked it, when, what for, outcome (success/rework/not used).

Week	Date	Agent	Invoker	Use Case	Time Saved (min)	Quality (1–5)	Friction (0–3)	Notes
1	2026-08-26							
1								
2								

Columns:

- **Week:** Phase 5 week number (1–12)
- **Date:** Invocation date
- **Agent:** Agent name (e.g., `doc-smith`, `ksa-compliance`, `react-19-architect`)
- **Invoker:** Team member name or role (e.g., "Alice / Docs", "Bob / Product")
- **Use Case:** What task did the agent help with? (e.g., "Draft PDPL policy", "Review React component", "Design schema migration")
- **Time Saved (min):** Estimated minutes saved vs. doing it manually (leave blank if N/A; 0 if no time saved)
- **Quality (1–5):** 5 = perfect first-draft output; 3 = usable with light edits; 1 = had to redo
- **Friction (0–3):** 0 = seamless; 1 = one follow-up needed; 2 = multiple iterations; 3 = more friction than doing it alone
- **Notes:** Any blockers, surprises, suggestions

Weekly Summary (Fill Monday morning)

Week	Total Invocations	Agents Used	Avg Quality	Avg Friction	Est. Cumulative Hours Saved	Key Blockers	Win of the Week
1							
2							
3							
4							
5							
6							
7							
8							
9							
10							
11							
12							

Cumulative totals at end of Phase 5:

- Total invocations across all agents: ____
- Unique agents used: ____
- Total hours saved (est.): ____
- Average quality across all invocations: ____ / 5
- Average friction across all invocations: ____ / 3

Per-Agent Effectiveness Score (Monthly)

Run this calculation at end of Weeks 4, 8, and 12 (after each month of Phase 5).

Formula: $\text{Effectiveness} = ((\text{Invocation Count} \times \text{Quality}) - \text{Friction}) \div \text{Time to Invoke}$

Agent	Invocations (mo)	Avg Quality	Avg Friction	Time to Invoke (min)	Effectiveness Score	Status
doc-smith				2		Keep / Iterate / Retire
ar-mirror				3		Keep / Iterate / Retire

Agent	Invocations (mo)	Avg Quality	Avg Friction	Time to Invoke (min)	Effectiveness Score	Status
ksa-compliance				5		Keep / Iterate / Retire
family-warden				4		Keep / Iterate / Retire
react-19-architect				3		Keep / Iterate / Retire
express-backend-pro				3		Keep / Iterate / Retire
regulatory-corpus-keeper				4		Keep / Iterate / Retire
sql-migrator				3		Keep / Iterate / Retire
genkit-rag-specialist				5		Keep / Iterate / Retire
flight-curriculum-designer				4		Keep / Iterate / Retire
ml-instructor-trainer				4		Keep / Iterate / Retire
flight-data-pipeline-engineer				3		Keep / Iterate / Retire
instructor-deployment-steward				3		Keep / Iterate / Retire
governance-auditor				3		Keep / Iterate / Retire
entity-facts-guardian				4		Keep / Iterate / Retire

Agent	Invocations (mo)	Avg Quality	Avg Friction	Time to Invoke (min)	Effectiveness Score	Status
cross-repo-sync				5		Keep / Iterate / Retire

Scoring guide:

- **Keep:** Effectiveness ≥ 1.0 (agent earned its slot; team loves it or it saves real time)
- **Iterate:** $0.5 \leq \text{Effectiveness} < 1.0$ (mixed results; refine agent scope, constraints, or team guidance)
- **Retire:** Effectiveness < 0.5 (unused or adds more friction than value; mark for removal in Phase 6)

Workflow Execution Tracker

Track when each workflow runs, who triggered it, and what it surfaced.

Week	Workflow	Trigger	Participant Agents	Outcome	Issues / Findings
1	/full-sync	Manual (ops lead)	entity-facts-guardian, cross-repo-sync	Green / Red	
2	/feature-ship	Manual (product lead)	react-19-architect, express-backend-pro, ksa-compliance	Green / Red	
3	/compliance-audit	Manual (compliance lead)	ksa-compliance, flight-data-pipeline-engineer	Green / Red	
Ongoing	/full-sync	Automatic (Sundays 18:00 UTC)	entity-facts-guardian, cross-repo-sync	Green / Red	

Team Adoption Snapshot (End of Each Week)

Week	# Team Members Using Agents	# Using Agents Regularly (3+/week)	New Agents Discovered	Most-Used Agent	Adoption Sentiment (1–5)
1					
2					
3					

Week	# Team Members Using Agents	# Using Agents Regularly (3+/week)	New Agents Discovered	Most-Used Agent	Adoption Sentiment (1–5)
4					
5					
6					
7					
8					
9					
10					
11					
12					

Sentiment scale: 1 = "Agents are a burden"; 3 = "Agents are useful sometimes"; 5 = "We can't imagine working without agents now"

Success bar: By end of Phase 5, ≥ 3 team members using agents 3+/week, adoption sentiment ≥ 4 .

New Hire Onboarding Progress

Track when first hires complete agent infrastructure training.

Hire #	Name / Role	Week Started	Agent Training Completed	Can Name 2 Agents	Has Run /full-sync	Notes
1						
2						
3						

Success criterion: Each new hire completes Week 1 agent orientation (reads training guide, runs /full-sync once, can name ≥ 2 agents).

Monthly Deep-Dive Snapshot (Weeks 4, 8, 12)

Month 1 Recap (End of Week 4)

Summary: [1-2 sentences on how teams adopted agents in the first month]

Wins: [List 2-3 concrete wins from invocation log — e.g., "doc-smith draft saved 3 hours on HR policy", "react-19-architect caught RTL bug early"]

Blockers: [List top 2-3 friction points — e.g., "ksa-compliance output too verbose", "unclear when to use regulatory-corpus-keeper vs. generic search"]

Agent Retirements Proposed: [Any agents to flag for potential retirement? List here.]

Improvements for Month 2: [Actionable changes based on feedback — e.g., "tighten ksa-compliance prompt", "add agent cheat sheet to Slack"]

Month 2 Recap (End of Week 8)

Summary:

Wins:

Blockers:

Agent Retirements Proposed:

Improvements for Month 3:

Month 3 Recap (End of Week 12)

Summary:

Wins:

Blockers:

Readiness for Phase 6:

- ☐ ≥ 3 team members using agents 3+/week
 - ☐ ≥ 2 features shipped via `/feature-ship` without manual friction
 - ☐ `/compliance-audit` completed; roadmap established
 - ☐ ≥ 2 new hires trained and productive
 - ☐ No agent has been marked "unused" or "friction" for 2+ consecutive months
 - ☐ Monthly effectiveness review shows positive ROI across portfolio
-

How to Use This Dashboard

1. **Weekly (Mondays 10:00 UTC):** Operations Lead opens the dashboard and logs the prior week's invocations from Slack (#fly-gaca-team thread). Updates "Weekly Summary" row for that week.

2. **Monthly (Week 4/8/12, after standup):** Operations Lead + Founder calculate per-agent effectiveness scores using the formula above. Mark each agent Keep / Iterate / Retire. Fill in "Monthly Deep-Dive Snapshot" section.
 3. **Standup Input:** Every Monday standup (06-operations-it/phase5-live-execution-plan.md, Weeks 6–8) references the dashboard summary — "This week: X invocations, Y agents used, Z hours saved."
 4. **Decision Record:** At end of Phase 5 (after Week 12), Founder files a decision-log entry summarizing Phase 5 learnings (agents that earned their slots, iterations needed, agents to retire, roadmap for Phase 6). Reference this dashboard.
-

Shared Access

- **Location:** Google Sheet (invite: Founder, Operations Lead, Product Lead, Flight Lead, Compliance Lead)
 - Or: Airtable base linked to this repo via `tools/` automation
 - Or: Keep as markdown here and Operations Lead updates locally, commits weekly
 - **Permission:** Operations Lead has write access; all team leads have read-only view for standup reference
