

flygaca.sa registration — readiness & risk (SaudiNIC)

SECTION 06-operations-it

TYPE document

STATUS **active**

OWNER Founder

UPDATED 2026-07-28

Now that the legal entity exists (CR 7030976893, BDA Company International), the SaudiNIC blocker on flygaca.sa is cleared. This is the readiness pack: eligibility, the process, the one real risk (the "gaca" substring), and the DNS plan. flygaca.com stays canonical either way — flygaca.sa is a defensive / local-trust redirect, not a migration.

Status

- **Unblocked (2026-07-28).** SaudiNIC (nic.sa) requires a registrant with a genuine relationship to the name; the LLC now provides that. See 06-operations-it/hosting-facts.md (Domains) and 00-strategy/phase0.md P0-2.
- flygaca.com owned & canonical; captadel.com owned. flygaca.sa is the open item.

! The one real risk — the "gaca" substring

"GACA" is the abbreviation of the **General Authority of Civil Aviation** — the regulator. "flygaca" contains it. SaudiNIC reviews every .sa request for a genuine name↔registrant relationship and screens names that could imply an official / government affiliation. Two consequences:

1. The request may be **queried or refused** on the ground that the name could be read as affiliated with GACA — which the product explicitly is **not**.
2. This is the same fault line as the pending **P0-2 name / trademark opinion** — do **not** register flygaca.sa before the lawyer weighs in on the name itself, because a .sa filing puts the name in front of a government registrar.

Mitigation / stance:

- Lead with independence: the registrant is **BDA Company International**, every surface carries the not-affiliated disclaimer, and the .sa use is a redirect to an independent educational library — be ready to state this in the request.
- Sequence it **after** the lawyer's name opinion (P0-2). If counsel flags the name, resolve that first — the domain follows the name, not the reverse.
- Have fallbacks ready (flygaca.com.sa , or a differently-branded .sa) if the name is contested. Losing flygaca.sa costs nothing operationally — flygaca.com remains canonical.

Eligibility & documents

Requirement	Status
Saudi CR / legal entity	✓ CR 7030976893
National access (Nafath / Absher Business) for the entity	Owner to confirm
Genuine name↔registrant relationship	The "gaca" review point above
SaudiNIC-accredited registrar	Pick one (below)

Process (SaudiNIC)

1. Confirm `flygaca.sa` availability on `nic.sa`.
2. Register through a SaudiNIC-accredited registrar (or the SaudiNIC portal), signed in with the entity's national access.
3. Submit the CR as registrant proof; expect a **name review** (the risk above). Respond with the independence framing if queried.
4. On approval, set nameservers / DNS (below).

DNS & hosting plan — redirect, don't split

`flygaca.sa` **301-redirects to** `https://flygaca.com` — the same marketing-domain consolidation the app already does (`worker/index.ts` , `vercel.json`). Do **not** serve a second copy of the site on `.sa` :

- Keeps the strict CSP and the single canonical origin intact.
- Avoids duplicate-content / hreflang complexity — the canonical stays `flygaca.com` (the SEO canonical tags already point there).

Once registered:

- Point `flygaca.sa` at the same edge (Cloudflare zone / registrar redirect) → `301 → https://flygaca.com` (apex + `www`).
- If the redirect must be app-side instead of at the edge, add `flygaca.sa` to the redirect map alongside `captadel.com` .
- No canonical/SEO change — `flygaca.com` stays the one indexed origin.

Records

Record the registrar, registration / expiry dates, and nameservers in `hosting-facts.md` ; set a renewal reminder; keep the registration certificate in the founder's records.
