

Fly GACA — Design Token Map (Design Mirror)

SECTION 11-brand TYPE document STATUS active OWNER Founder UPDATED 2026-06-16

2026-06-16 · Source: flygaca.com (live) · Target: flygaca/ (local)

Finding: live = local (no drift)

The deployed `flygaca.com/assets/css/tokens.css` is **byte-for-byte identical** to the local `flygaca/assets/css/tokens.css`. The live site and the local codebase share one canonical design system — there is nothing external to mirror and no drift to reconcile. This document captures that canonical system and the accessibility QA, so it can serve as the design-system reference.

The Falcon palette

Token	Value	Role
<code>--falcon-night</code>	<code>#0A0E12</code>	primary canvas (page bg)
<code>--falcon-deep</code>	<code>#0F1A24</code>	elevated card surface
<code>--surface-raised</code>	<code>#13212E</code>	hover / raised card
<code>--falcon-mist</code>	<code>#1A2A38</code>	dividers / borders
<code>--border-bright</code>	<code>#26384A</code>	brighter border
<code>--falcon-teal</code>	<code>#2D6E8A</code>	primary brand (fills, buttons)
<code>--teal-bright</code>	<code>#4A9CB8</code>	hover, links, focus rings
<code>--falcon-sage</code>	<code>#8FC9A8</code>	secondary accent / success
<code>--sage-bright</code>	<code>#B5DDC2</code>	highlight / focus
<code>--falcon-gold</code>	<code>#C8A04A</code>	heritage accent (sparingly)
<code>--ivory</code>	<code>#F5F2ED</code>	light reading surface

Text: `--text #E8EDF2` · `--text-muted #9DA9B4` · `--text-dim #8A95A1` · `--text-on-brand #FFFFFF`.
Gradients: `--grad-brand` (teal→sage 102°), `--grad-wing` (155°). Glows: `--glow-teal`, `--glow-sage` (mark/hero only).

Typography

- Family: `'Cairo', system-ui, ...` (bilingual EN/AR, Cairo carries Arabic). Mono: SF Mono / JetBrains Mono stack.

- Fluid scale: display `clamp(2.6→4.6rem)`, h1 `clamp(2→3rem)`, h2 `clamp(1.55→2.15rem)`, h3 `1.3rem`, lg `1.15`, base `1`, sm `0.9`, xs `0.78`.
- Weights 400/500/600/700/800. Line-heights: tight 1.15 · snug 1.35 · body 1.65.

Spacing · radii · elevation · layout

- Spacing (4px base): 0.25 / 0.5 / 0.75 / 1 / 1.5 / 2 / 3 / 4 / 6 / 8 rem.
- Radii: sm 8 · md 14 · lg 20 · xl 28 · pill 999 px (brand tile radius = 0.22 × side).
- Shadows: sm, card `0 8px 28px rgba(0,0,0,.45)`, pop `0 18px 50px rgba(0,0,0,.55)`.
- Layout: container 1180 · narrow 760 · nav-height 68px. Motion: ease `cubic-bezier(.4,0,.2,1)`, dur 0.2s/0.4s.

Accessibility QA — WCAG contrast (computed on the Falcon palette)

Pair	Ratio	Verdict
<code>--text</code> on <code>--bg</code>	16.44:1	PASS AA
<code>--text-muted</code> on <code>--bg</code>	8.09:1	PASS AA
<code>--text-dim</code> on <code>--bg</code>	6.36:1	PASS AA
<code>--link</code> (teal-bright) on <code>--bg</code>	6.21:1	PASS AA
<code>--text-dim</code> on <code>--surface</code>	5.78:1	PASS AA
<code>--text-on-brand</code> (#fff) on <code>--brand</code>	5.66:1	PASS AA
<code>--gold</code> on <code>--bg</code>	7.91:1	PASS AA
<code>--falcon-teal</code> AS text on <code>--bg</code>	3.42:1	Large-text/UI only — correctly avoided

Every body/text token meets AA for normal text. The only sub-AA value is the brand teal used *as text*, which the system deliberately avoids — it routes link/text colour through `--link` (#4A9CB8) instead, per the token comment. The action plan's §4.6 contrast fix (`--text-dim` → `#8A95A1`) is already in place (6.36:1).

Verdict

No restyle applied — none warranted. The design system is internally consistent, already on-brand, dark-first, bilingual/RTL-ready, and passes WCAG AA across its text tokens. If you want to genuinely re-skin Fly GACA, point Design Mirror at an *external* inspiration site (with Bright Data credentials set) and I'll translate that design language onto this token layer.
