Fly GACA — The Office

The complete operating system for Saudi Arabia's independent civil aviation education platform.

Every document, policy, playbook, and specification that runs Fly GACA — in one version-controlled repository.

What is this?

FlyGACA/Office is the internal documents repository ("The Office") for [Fly GACA](#) — an independent educational platform and open regulatory library for Saudi civil aviation (GACAR, AIP, charts, ground school, and Captain Adel, the AI flight instructor).

This repo stores every operating document that runs the company: legal contracts, compliance programs, HR policies, GTM playbooks, investor materials, brand assets, and engineering specs. Polished deliverables live as `.docx` / `.xlsx`; working notes, specs, and drafts are `.md`. Every `.md` file has a **print-ready branded PDF** under `_print/`.

Fly GACA is a family of ten repositories; this is the internal-docs one. [The Book of Fly GACA](#) maps them all — product surfaces, shared principles, and the glossary — in one place.

[!IMPORTANT] Fly GACA is **not affiliated with GACA** (Saudi General Authority of Civil Aviation). Every user-facing surface reinforces one rule: verify against the latest official GACA publication. This platform helps you *find and study* regulation — it never replaces it.

Quick Start

```
# Clone the repo
git clone https://github.com/FlyGACA/Office.git
cd Office

# Start from the master index
open _INDEX.md           # macOS
xdg-open _INDEX.md       # Linux

# Rebuild print-ready PDFs after editing any .md
cd tools/print
npm ci                   # one-time install (no browser download)
npm run build            # incremental – only changed docs re-render
```

[!NOTE] The print pipeline needs **Node 18+** and **Chromium ≥ 131**. Fonts are vendored in `tools/print/fonts/`, so rendering runs fully offline. Full usage: [tools/print/README.md](#).

Repository Structure

Twelve numbered sections (00–11), each independently browsable:

#	Section	What's Inside
00	Strategy	Annual plan & OKRs, master roadmap, CEO execution plan (Sprints 0–3), Phase 0 tracker, 10 numbered brainstorm
01	Governance	Founders' agreement, SHA, ESOP, Code of Conduct, board pack, live decision log
02	Legal	NDA templates, EULA, SLA, pilot agreement, PDPL policies, DPA, IP & takedown procedure
03	Finance	Banking policy, procurement, expense policy, budget-vs-actual tracker, KPI dashboard
04	Compliance (KSA)	MISA license, ZATCA e-invoicing, PDPL DPIA, BCP/DR, Nitaqat plan, compliance roadmap
05	People	Employment contracts, employee handbook, offer letters, onboarding/offboarding, HR policies
06	Operations / IT	Digital office setup, product specs (CRM, Captain Adel, Instructor Dashboard), runbooks, architecture diagrams
07	Go-To-Market	Sales playbook, demo script, objection handling, cold outreach, B2B pipeline, SEO strategy
08	Customer Success	Onboarding playbook, health scoring, NPS, QBR templates, at-risk & expansion playbooks
09	Investor Relations	Pitch deck, FAQ, due diligence questionnaire, investor update template, risk register

#	Section	What's Inside
10	Academy & Curriculum	Curriculum map, coverage matrix, PPL mock exams, B2C learner paths, instructor onboarding
11	Brand	Design system, design tokens, style guide, Falcon theme, logos, print assets (EN + RTL AR)

Support directories:

Path	Purpose
<code>_INDEX.md</code>	The readable master index across all 12 sections
<code>templates/</code>	Reusable <code>.md</code> starters: finance report, HR policy, legal memo, ops runbook, strategy proposal
<code>ar/</code>	Full Arabic (Saudi MSA) mirror of all 12 sections — same structure, translated content
<code>tools/print/</code>	Markdown → branded A4 PDF pipeline (Falcon document theme, EN + RTL Arabic)
<code>_print/</code>	Generated print-ready PDFs, mirroring the full tree

🌟 Key Capabilities

Capability	Detail
 Version-controlled operations	Every policy, contract, and spec is a Git commit — full history, diffs, and blame
 Automated print pipeline	Any <code>.md</code> edit → one command → branded, watermarked A4 PDF, no design tool needed
 Bilingual from day one	Full Arabic (MSA) mirror under <code>ar/</code> ; filenames stay ASCII kebab-case for easy diffing
 YAML front-matter on every doc	<code>title / section / doc_type / status / owner / last_updated / lang</code> — machine-readable metadata
 KSA-compliant legal stack	PDPL, ZATCA e-invoicing, MISA, Nitaqat — purpose-built for Saudi regulatory requirements
 Captain Adel specs included	Full AI flight instructor spec, refusal protocol, deployment runbooks, and eval harness
 Design system baked in	Falcon Theme: Inter body · Cairo headings · JetBrains Mono · Falcon Blue accents

Arabic Localization

The `ar/` directory is a complete, parallel Arabic translation of the entire document tree — same folder structure, same filenames, translated content in **Modern Standard Arabic (Saudi official register)**.

- 118 `.md` files translated and maintained in sync
- Unified terminology via `ar/_GLOSSARY.md` (EN↔AR term glossary)
- Arabic PDFs render **right-to-left** (Cairo font, RTL layout) via the print pipeline
- Latin code paths and file names remain LTR inside Arabic documents

[!NOTE] English is the authoritative source. On any conflict, the English tree governs.

Print Pipeline

Every `.md` document generates a **branded, print-ready PDF** under `_print/`, mirroring the folder tree. The pipeline uses markdown-it + headless Chromium and the Falcon document theme:

- **Fonts:** Inter (body) · Cairo (headings + Arabic) · JetBrains Mono (code) — all vendored offline
- **Layout:** A4, 0.75 in margins, footer page numbers, branded cover block from YAML front-matter
- **Watermarks:** `status: draft` or `scaffold` → automatic DRAFT/SCAFFOLD watermark on every page
- **Incremental:** `.buildcache.json` tracks content hashes — unchanged docs are skipped

```
cd tools/print
npm run build          # incremental rebuild
npm run build:force    # rebuild everything from scratch
node build.mjs 02-legal/terms-of-use-draft-2026-06-14.md # render one document
```

See `tools/print/README.md` for full usage and configuration.

Brand

The Falcon design system, logo marks, and print collateral in `11-brand/` give every Fly GACA document — including this repo's generated PDFs — a consistent identity.

```

```

Current Status

Phases as numbered in [00-strategy/roadmap.md](#).

Phase	Title	Status
0	Foundations	🟡 Legal track in progress
1	Library live	✅ Live
2	Captain Adel	✅ Live (RAG on Gemini 2.5 Flash)
3	Pilot accounts	🟡 Built; PDPL DPIA pending
4	Arabic & polish	🟡 Bilingual engine live; inner pages in progress
5	Money & flight schools	⬜ Not started
7	Training platform	🟡 162-question bank, flashcards, analytics shipped
8	Library as a platform	✅ All 6 features shipped
9	Launch & visibility	🟡 Deployed; custom domain & GTM pending
10	Captain Adel (prod-grade)	🟡 Rate limits & evals shipped; App Check pending
11	Depth — practical sections	✅ 21 tools, 11 guides, study bank complete

The **legal track** (entity registration, lawyer engagement) is now the critical path to public launch.

Contributing & Governance

This repo follows the governance documents in [01-governance/](#):

- [CONTRIBUTING.md](#) — setup, conventions, pre-PR checklist
- [CODE_OF_CONDUCT.md](#) — community standards
- [SECURITY.md](#) — responsible disclosure
- [CLAUDE.md](#) — AI assistant context and architecture guide (root; [01-governance/CLAUDE.md](#) points here)

All contributions are licensed under [Apache License 2.0](#). Regulatory content belongs to GACA and is not covered by that license.

For security issues or data-isolation concerns, **do not open a public issue** — email the maintainer directly (see [SECURITY.md](#)).
