

Fly GACA — Office Documents Follow-up Roadmap

SECTION 06-operations-it

TYPE plan

STATUS **active**

OWNER Founder

UPDATED 2026-07-04

Purpose. The 2026-07-03 refactor pass (see `repo-health-report-2026-06-16.md` §Addendum) reorganized the office, filled the scaffolds, and added the print pipeline. It left a defined tail of work: nine new/rewritten documents are still `status: draft` carrying **60** `[Owner to confirm]` markers, plus a few docs-infrastructure cleanups. This roadmap sequences that tail to done.

Created: 2026-07-04. **Owner:** Founder (solo). **Not legal advice.** **Scoreboard — two numbers:** (1) How many of the 9 new drafts are adopted (`status: active`)? (2) Is the HR pack ready before the first non-founder hire?

This is the *documents* roadmap. It complements the two existing roadmaps and does not repeat them: `00-strategy/roadmap.md` (product, done) and `00-strategy/ceo-execution-roadmap-2026-07.md` (go-to-company — legal/entity/first customer). Where a document here is gated on a legal or entity step, the gate lives in that CEO roadmap; this file only points at it.

The nine drafts in play

Document	Section	<code>[Owner to confirm]</code>	Gated by
finance-strategy.md	03-finance	10	Phase 0 (your numbers)
investor-thesis.md	09-investor-relations	6	Phase 0 (your numbers)
compliance-roadmap.md	04-compliance-ksa	9	Phase 0 + entity track
refund-and-cancellation-policy-draft-2026-07-03.md	02-legal	6	Phase 1 (counsel)
order-form-template-2026-07-03.md	02-legal	4	Phase 1 (counsel)
onboarding-checklist-2026-07-03.md	05-people	7	Phase 2 (first hire)
offboarding-checklist-2026-07-03.md	05-people	6	Phase 2 (first hire)
grievance-and-disciplinary-procedure-2026-07-03.md	05-people	7	Phase 2 (first hire)
anti-harassment-policy-2026-07-03.md	05-people	5	Phase 2 (first hire)

Each has an identical Arabic mirror under `ar/`; adopting a document means flipping **both** copies to `status: active` and rebuilding their PDFs (`cd tools/print && npm run build`).

Phase 0 — Owner desk review · *now, no external dependency*

Answer the markers only you can settle — before anything goes to a lawyer. This unblocks every later phase. Convert each marker to either a real value or an explicit stated assumption.

#	Decision to make	Docs it unblocks	Done when
0.1	Stripe vs Moyasar (the DEC-open item in <code>decision-log.md</code>)	refund policy §7, finance-strategy, order-form	Processor named; refund-routing + sub-processor register updated
0.2	Entity form: MISA license vs CR-only, sole-proprietorship vs LLC	compliance-roadmap, both legal drafts (operator name)	Chosen; compliance-roadmap tables reflect it
0.3	VAT registration timing + pre-registration invoice/VAT-line treatment	order-form §2, refund policy §8, compliance-roadmap	Timing set; invoice template VAT line finalized
0.4	Proposed windows: refund 30d / renewal 7d / prep-pack 14d / consult 48h; B2B net-30; seat grant on signature vs payment	refund policy, order-form	Confirmed or adjusted
0.5	The ask : amount / instrument / valuation / use of funds; TAM basis	investor-thesis	Filled or deliberately left <code>[TBD until raise]</code>
0.6	One-time fee amounts (lawyer / CR / gateway); cash + runway; banking signatory model	finance-strategy	Numbers in
0.7	Employee medical-insurance provider; HR-record retention period	HR pack (×4)	Values in

Phase-0 done-when: zero unanswered `[Owner to confirm]` markers remain — each is either a value or a written assumption.

Phase 1 — Legal drafts → counsel · *gated on the lawyer engagement in the CEO roadmap*

`refund-and-cancellation-policy` and `order-form-template` carry placeholder-entity text and must not be published until reviewed. They ride the **same** lawyer engagement as DEC-007/008 (`ceo-execution-roadmap-2026-07.md` Sprint 0) — add them to that brief; do not open a separate engagement.

Step	Done when
Add both drafts to the lawyer brief bundle	Bundle includes them

Step	Done when
Counsel review + edits	Comments resolved
Replace placeholder operator with registered CR/VAT identity	Entity name/CR/VAT in both docs
Flip <code>status: draft → active</code> (EN + AR); rebuild PDFs	Both trees active; PDFs regenerated
Publish	Only at payments-launch gate L2 (CEO roadmap)

Phase 2 — HR pack activation · *before the first non-founder hire*

The four HR docs need owner review, ideally a Saudi HR/counsel check, and **one concrete appointment** they both depend on.

Step	Done when
Appoint an external grievance/harassment recipient for founder-conflict cases	Named in grievance §4.1(4) + anti-harassment §5.1(2)
Owner (+ HR/counsel) review of all four docs	Comments resolved
Draft the two P2 stubs they reference: Probation Review Form, PIP template	Both exist (only if hiring is near)
Wire Employee-Handbook acknowledgment into onboarding Day 1	Onboarding checklist Phase B references the signed acknowledgment
Flip <code>status → active</code> (EN + AR); rebuild PDFs	Pack active

Phase 3 — Strategy docs → active · *gated only on Phase 0*

`finance-strategy`, `compliance-roadmap`, `investor-thesis` need **no counsel** — only your Phase-0 answers. Once the numbers/decisions are in, flip `status → active` (EN + AR) and rebuild.

Phase 4 — Docs-infrastructure follow-ons · *independent; can be done any time*

Item	Why	Owner	Status
Extend the pipeline to the HTML brand docs (<code>the-book-of-fly-gaca.html</code> , <code>brainstorms dashboard</code> , <code>design-system.html</code> , <code>tidal-reckoning.html</code>)	the only docs not yet in <code>_print/</code>	Claude	✅ done — <code>tools/print/build-html.mjs</code> ; PDFs under <code>_print/</code>

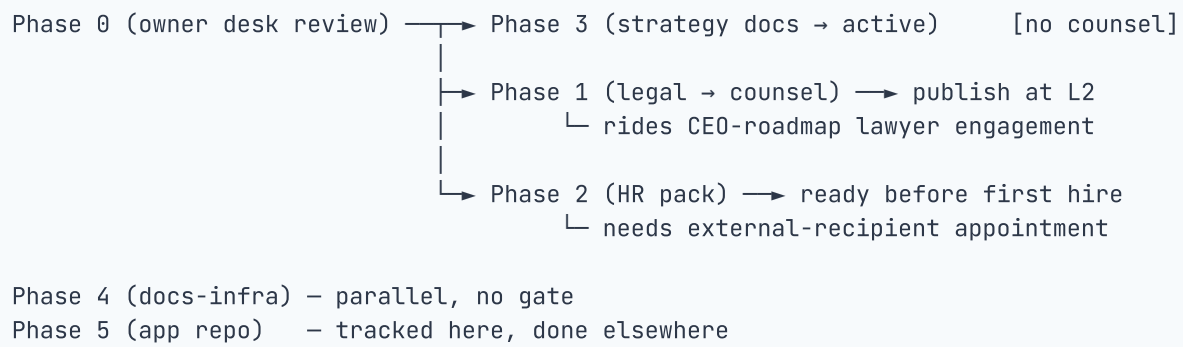

Item	Why	Owner	Status
CI guard: assert every <code>.md</code> has standard front-matter + an up-to-date PDF, and every brand HTML has a PDF	stops <code>_print/</code> and metadata drifting from source	Claude	✅ done — <code>tools/print/check.mjs</code> + <code>.github/workflows/docs-check.yml</code>
Move <code>_print/**/*.pdf</code> to Git LFS	repo is ~95 MB; PDFs are ~82 MB of it	Founder	🚫 blocked in the build environment (no <code>git-lfs</code> ; needs a history rewrite + force-push) — run locally: <code>git lfs install && git lfs track "_print/**/*.pdf" && git lfs migrate import --include="_print/**/*.pdf"</code>
Reconcile the Google-Sheet master index (health-report X1 / FLY-9) — 204 old→new filename pairs	the sheet is AI-locked; needs a manual paste from the CSV	Founder	manual
Delete the duplicate originals in <code>library/06-product-eng/</code> + <code>flygaca/office/</code> (<code>consolidation-manifest-2026-06-16.md</code>)	dedup cleanup still open	Founder	manual

Phase 5 — App-repo backlog · *cross-reference only; executed in the app repo, not here*

Logged in the health-report addendum; tracked here for one-page visibility:

- `quiz.json` `correct: null` on all 162 questions — the self-assessment is decorative until fixed. Highest curriculum priority.
- Analytics wiring (empty Cloudflare token; local-only error beacon).
- **Stripe vs Moyasar** decision (same as 0.1) then wire checkout to the pricing CTA.
- CI parity guards for the hand-synced lists (`guards.js` , `TESTER_EMAILS` ↔ `staff.js`).

Sequencing at a glance

This roadmap is a living tracker. Update the status of each phase as items close; when all nine drafts are `active` and Phase 4 is done, retire this file into the health report's history.
